Understanding User Needs w Product (Jay)

Invited Jade Nakabayashi Jay Green

Attachments 📎 Understanding User Needs w Product (Jay)

Meeting records 📄 Transcript 🎙 Recording

Summary

Meeting reviewed current product workflows and confirmed the strategic necessity for unified system integration and automation.

Workflow and System Usage

Current processes rely on external tools for 1-sheet creation and onboarding. Legacy systems lack the scalability required for efficient sales and partner operations.

System Limitations and Inefficiency

Manual data extraction and fragmented tracking create significant operational friction. Reliance on disjointed spreadsheets and manual reporting hinders organizational speed and visibility.

Strategic Integration Requirements

The team prioritized centralizing workflows by integrating custom asset tracking and reporting. Transitioning away from external tools toward a unified system was established as the strategic focus.

Decisions

Aligned

- **Onboarding process audit initiation** The onboarding process requires an audit to identify and remove redundant or non-functional elements to improve efficiency.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [Jay Green] Share Tracker: Share the custom opportunity tracker spreadsheet with Jade Nakabayashi.
- ☐ [Jay Green] Share Master Sheet: Share the current custom master spreadsheet with Jade Nakabayashi.
- ☐ [Jay Green] Explain Canva Templates: Present the Canva one sheet templates and explain their usage to Jade Nakabayashi.

Details

- **Introduction and Project Goal:** Jade Nakabayashi is conducting initial meetings to understand the Daylight digital product workflow, with the specific objective of gaining a holistic view of the team's processes and functions. Jade Nakabayashi is gathering information on current user workflows, individual roles, and requirements to identify opportunities for future product enhancements ([00:00:18](#)).
- **Role of Content Partnerships Team:** Jay Green, the Executive Vice President of Business Strategy and Partnerships, manages the content partnerships team,

which serves as the primary conduit between sales and content partners ([00:01:07](#)). The team oversees the show onboarding process into the Marley system, coordinates with sales, and manages custom sales pieces, a workflow primarily handled by team member Annie Han ([00:02:09](#)).

- **Marley System Usage and Operations:** The team relies heavily on Marley to manage show onboarding, which involves sending and receiving surveys to populate the system with information from talent, producers, and shows. Marley is used to track vetting, ad operations, and partner communication, though Jay Green noted the system is also utilized for monitoring billing and identifying invoicing gaps ([00:02:09](#)).
- **Operational Challenges and Flexibility:** Jay Green expressed a need for increased speed and flexibility, noting that current ad plan updates require approval from Scott and the product team, which is not scalable. Jay Green highlighted a desire to centralize tracking efforts, specifically requesting the ability to link Marley with Podscribe to monitor whether ad runs are executing correctly without navigating to external platforms ([00:04:33](#)).
- **One-Sheet Creation and Distribution:** Annie Han currently utilizes Canva to create show one-sheets, which are hosted on Google Drive, because the existing Marley-based creation tool is unscalable and tedious to use. Jay Green advocated for a solution that allows for auto-generated PDFs or shareable links directly within Marley, rather than relying on manual file creation and distribution ([00:05:43](#)) ([00:10:10](#)).
- **Success Metrics and System Flexibility:** Jay Green defined success as having a system that provides partners with easy data access, allows the team to view systems from a partner's perspective, and maintains flexibility for custom work rather than forcing users into rigid, legacy functions ([00:12:25](#)).
- **Custom Asset and Booking Workflows:** Management of custom assets is currently performed using Excel and Canva, as Marley lacks the necessary tools to build out these custom components ([00:13:23](#)). Jay Green manually extracts booking data from Marley every Monday to create Excel pivot tables, and requested a new reporting feature within Marley that would automate this process for the team ([00:14:24](#)).
- **Tracking Sponsorship Packages and Host Details:** Custom sponsorship packages often include segment sponsorships, studio tours, social media posts,

and special interviews ([00:15:46](#)). Jay Green noted that the team needs to track granular host details—such as pets, birthdays, and specific sponsor requests like a 30-day Whoop armband test—which are currently stored in disparate, manual documents rather than in a unified system ([00:17:24](#)).

- **Custom Master Sheet Integration:** Jay Green maintains a custom master sheet that aggregates data on sponsorship pricing, product placement, and segment details, which currently functions outside of the Marley ecosystem ([00:20:18](#)). Jay Green emphasized the need to integrate this data into Marley and link it with existing rate card information, which would allow sellers to efficiently identify and price opportunities like product placements ([00:21:24](#)).
- **Onboarding Process Improvements:** The current onboarding process is described as manual and clunky, relying on surveys that are emailed to contacts. Jay Green suggested that the system should be able to perform tasks like scraping Instagram follower counts automatically and that the onboarding flow requires an audit to remove redundant or outdated steps ([00:24:26](#)) ([00:26:50](#)).
- **Future System Requirements:** Jay Green identified the top priorities for improvement as integrating custom asset tracking, enhancing reporting capabilities, and streamlining the onboarding process to reduce manual labor ([00:23:31](#)). Jay Green concluded that the primary opportunity is to phase out reliance on side-built tools like AirTable and manual spreadsheets in favor of a more fluid, integrated system ([00:27:58](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

*How is the quality of **these specific notes**? [Take a short survey](#) to let us know your feedback, including how helpful the notes were for your needs.*

Understanding User Needs w Product (Jay) - Transcript

00:00:18

Jade Nakabayashi: Hey J.

Jay Green: Hey Jade, how are you?

Jade Nakabayashi: Well, how are you?

Jay Green: Good, thanks. It's great to meet you.

Jade Nakabayashi: Music as well. Oh, look at all your guitars.

Jay Green: Oh yeah, thank you. Thank

Jade Nakabayashi: Um, so thanks so much for taking the time.

Jay Green: you.

Jade Nakabayashi: I'm Jade. I'm new. I'm helping Salmon Product out with the new digital product. Um, I have set up a few I think that you've heard that I'm coming, but I've set up a few meetings with the team just sort of to obviously learn a lot more about Daylight. Um, sort of paint the holistic picture of everyone that's involved and how everything works together. Um, and then also really want to focus on understanding sort of like what your role is, what your sort of like hopes and dreams for the product are,

Jay Green: Mhm.

Jade Nakabayashi: like what your existing workflow looks like. Um, and yeah, it's really just sort of an opportunity for sort of you to say like I want to do this and I want things to be better in this way

00:01:07

Jay Green: Sure.

Jade Nakabayashi: and then I'm just also again trying to understand the whole picture. Um, before I get started, is it okay with you if I record just for myself to refer back to? Wonderful.

Jay Green: Question.

Jade Nakabayashi: Thank you so much. Okay, cool. So, yeah,

Jay Green: Um,

Jade Nakabayashi: if we can just start up if you can just tell me a little bit bit about yourself like what's your role? How long have you been here?

Jay Green: sure.

Jade Nakabayashi: What does success look like to you?

Jay Green: Um,

Jade Nakabayashi: What keeps you up at

Jay Green: sure. Uh, I'm EVP of business strategy and partnerships.

Jade Nakabayashi: night?

Jay Green: Uh, ultimately I run the content partnerships team. Um, once a show is signed, my team runs Point on that show, onboarding them into daylight. Um, getting them all set up in Marley, ensuring that sales has all of the proper information. Um, and realistically we're the conduit between sales and contents, our content partners. Um,

Jade Nakabayashi: Okay.

00:02:09

Jay Green: we also run the uh custom uh pieces for sales. Um, Annie Han on my team who you'll be meeting with. Um, she is running the custom portion. So, she works with the partners on developing the ideas, um, packaging them and positioning them to sales. Um, so that's kind of the overall gist. Obviously, it goes a lot deeper than that.

Um, I guess starting with onboarding, we rely very heavily on Marley to onboard the shows. Ryan and my team is in charge of that. Um, that means sending out the surveys, getting all of the information that we need from the talent, from the shows, from the producers to populate Marley um, so that we can launch to sales. and and begin properly selling it. From there, once a show is launched, um our team uses it to track that uses Marley to track the vetting, make sure that everything's getting done there, whether it's getting the answers in, getting timing responses. Um, and you know that that's really on ad ops also, but my team is using it to communicate with the shows,

00:03:21

Jade Nakabayashi: Mhm.

Jay Green: the partners to let them know, you know, uh, to for tracking purposes, right? To let them know like, hey, you need to be quicker. Hey, you need more answers or you're doing good here, whatever it is. Um, you know, it's almost like a checklist, if you will, of what makes a good partner. Um, from there I also I use it very intensely to track the billing of our partners,

Jade Nakabayashi: Mhm.

Jay Green: see where holes are, uh, so we can report back to partners and communicate with the partners. Same thing with invoicing. I mean, my team really looks at kind of everything, if you will. Um,

Jade Nakabayashi: Yeah.

Jay Green: um, especially me. Um, what keeps me up at night?

Jade Nakabayashi: What keeps you up at

Jay Green: A lot of a lot of things really. Um,

Jade Nakabayashi: night?

Jay Green: you know, Um, we need to be what's we do, we need to be able to maneuver quickly. Um, and have as much flexibility as possible with creating shows, with updating their ad plans.

00:04:33

Jay Green: You know, right now it's the way it's built and it's no, it's just the way it is. uh you know a change to ad plan needs to go through Scott and that's not um that's not scalable for us that's not scalable for Scott or product right that's not something he should be doing um we should be a you know I want to be able to do a lot more tracking for our custom pieces in there you know right now Annie uses basically an Excel sheet Google sheets to track all of the custom projects um where they are where they live you We save everything in Google Drive. I want to be able to have that accessible to sales in Marley that they can go look for. Hey, what are the c what what's our custom opportunities or what have we done for XYZ show prior so that I can work off this um and work with Annie off of it. Um, same thing with tracking our numbers. Um, you know, excuse me, uh, track tracking our numbers. Um, linking it to Podscribe so that we can see what's run properly, what hasn't run properly without having to go to another platform.

00:05:43

Jay Green: Um, yeah, I want, you know, just a hub for everything we do. it, you know, want to be able to keep and track everything, right?

Jade Nakabayashi: Yeah. Yeah. messed up.

Jay Green: That that

Jade Nakabayashi: Like it's been like such a disparate system and like it sounds like the system you have is like quite manual and there are like

Jay Green: Yeah.

Jade Nakabayashi: many redundancies across.

Jay Green: Yeah.

Jade Nakabayashi: Yeah.

Jay Green: Um apologize as I eat lunch.

Jade Nakabayashi: No, no, you're

Jay Green: Um Annie works a lot in

Jade Nakabayashi: fine.

Jay Green: Canva uh creating our one sheets. Um you and now they're all hosted on Google Drive for right now.

Jade Nakabayashi: Okay.

Jay Green: Scott had created a really cool one sheet in Marley. I like it. I think they look really good. Um,

Jade Nakabayashi: Can you maybe sort of like share those with me? I mean, can you maybe like pull them up and talk through them?

Jay Green: sure.

Jade Nakabayashi: This is the first time that I've heard of anyone using Canva, so

00:06:45

Jay Green: Uh, we we use Canva a lot. Um,

Jade Nakabayashi: Okay.

Jay Green: you know, that's where we create our decks. That's where we create um well basically everything. So right now if you see my screen

Jade Nakabayashi: Damn

Jay Green: here

Jade Nakabayashi: it.

Jay Green: sorry everything's running slow.

Jade Nakabayashi: No.

Jay Green: So you can see right here partnerships show one sheets and it's literally hang on street you grew up on these are these are PDFs from Canva of the one sheet.

Jade Nakabayashi: Okay.

Jay Green: Oh, that's really small. I don't know why that is. There we go. That's better. Um, just basics, right? Now, I know Steve had talked about having Marley create the one sheets with all the data we have, and that's it's, you know, that could be ideal, too, which would be great. Um, whereas in Marley

Jade Nakabayashi: But you all are effectively creating these to send to advertisers to market the show and help them understand.

Jay Green: Right. Exactly.

Jade Nakabayashi: Yeah.

00:08:16

Jay Green: Whereas what Scott had created, if I can find it, I haven't used it in a while.

Jade Nakabayashi: When does that fall into just like the overarching workflow process?

Jay Green: As part of the onboarding before we send it off to

Jade Nakabayashi: Okay.

Jay Green: sales,

Jade Nakabayashi: So when you introduce a new show, this is just you're just creating the stock so that you have it in the

Jay Green: right,

Jade Nakabayashi: index.

Jay Green: we have a template. She has a template she created and that's what we use. Right.

Jade Nakabayashi: Okay.

Jay Green: Um, Scott had kind of created this piece in Marley here to create one for a show. So, you come here and add the show.

Jade Nakabayashi: Mhm.

Jay Green: We'll say street you grew up on. And because you can create different versions of it, we'll just call this um test jade. All right. So, here you can come in. Um, oh, camera deck URL. That's new. I don't know what that is for. Um, interesting. Well, I've learned about that.

00:09:12

Jay Green: Um, kids ad record. This is interesting. You made some changes on here I did not know about. Um, so then you can view it here. That's a bad one to do. Shoot, I shouldn't have done this one. Um, here we'll look at the Shan Ryan show, which was done a while back. We'll do this one. And it's shared online very easily, obviously. It just looks a little bit different here. Um, but you can't create a PDF of it. You can't put it into a deck. You can't do so much. What what you can do here is it gives you the latest episodes online, you know, the audio episodes, which is really cool that you can play from. Um, but again, you can't do more. You really can't do much more with it other than um

Jade Nakabayashi: right? You need to be able to parse this. that you can put in other environments to share through.

Jay Green: Right.

00:10:10

Jay Green: Right. Like having the channel advertises here is cool. This is wrong.

Jade Nakabayashi: Yeah.

Jay Green: I don't know why it says episode length is three minutes. That's incorrect. Um, we'll figure that one out. Um, but anyway, that's that's what that is. So, I think I would love to see like a happy media, happy marriage between the two of them.

Jade Nakabayashi: But the link is help like you are sending the link out.

Jay Green: I don't I'll be honest, I don't know how many sellers are actually using the Marley version anymore. Um,

Jade Nakabayashi: Okay.

Jay Green: simply because it it's kind of tedious to to create. Um, you know, again,

Jade Nakabayashi: Yeah.

Jay Green: what Scott created was great. Um, and Phil definitely filled the need at the it just wasn't scalable. And I think, you know, I think he knew that too. Just we needed something at the time. Um, you know, in Canva, try this here. If there's a look, I mean, if there's a way to create something like that in Canva, you pulling from Mar pulling data from Marley could be pretty cool, right?

00:11:16

Jay Green: Um, I don't know. But again, I don't know what I don't know. U but here here's what Annie does with the one sheets. So she has her template right now and

Jade Nakabayashi: Yeah, it sounds like it could just be autogenerated in the system.

Jay Green: I'm

Jade Nakabayashi: It's just the way that it's being output doesn't meet your needs, right? Yeah. So,

Jay Green: right.

Jade Nakabayashi: if this template or one like it existed in Marley or like a new iteration of the product and it just autopop populated this stuff and maybe you could edit it a little bit but it just spit out a PDF.

Jay Green: Yeah.

Jade Nakabayashi: Is there any other thing that you need besides a PDF?

Jay Green: Well, we need to be able to send links of it, too, Right. Um because people they don't always want the PDF.

Jade Nakabayashi: Okay.

Jay Green: They want a link to hold to hold it all. You know, they also want to uh we should be able to update a giant company link that gives you access to all of them at once and updates, you know, as we add more almost like, you know, like a a network uh link if you would.

00:12:25

Jade Nakabayashi: But your your function rely is focus more on like the building of this asset than like the distribution, right? It's just so that

Jay Green: Yeah, but the distribution also does kind of lie with us,

Jade Nakabayashi: it's

Jay Green: right? Because ultimately if the the product itself lays under our our team. So, you know, I find responsibility in being able and creating the easiest way for distribution

Jade Nakabayashi: Right. Right.

Jay Green: of of that product.

Jade Nakabayashi: Right. I guess just taking a little bit of a step back, what do you like what's what does success look like to you? Like what are your key markers of success as a team for you and your

Jay Green: um for all of our partners to have easy access to all of their data.

Jade Nakabayashi: team?

Jay Green: Um for my team to have access to all of the data, to be able to see what our partner sees at the same time, right? Because if somebody goes says, "Hey, I'm seeing this doesn't make sense." I want to be I want my team to be able to go in and look as if they are that

00:13:23

Jay Green: partner. um and have flexibility to grow as we're doing more um you know with the custom stuff. Hey, you know I don't I don't want the system to be rigid, right? Where where anyone on my team or anybody at all is locked

Jade Nakabayashi: Yeah.

Jay Green: into a function because that's how it was built at the time. We need to be able to um to be fairly

Jade Nakabayashi: Right.

Jay Green: flexible.

Jade Nakabayashi: because so much of what you're doing is custom advice, right?

Jay Green: It change it changes day to

Jade Nakabayashi: Can you maybe like talk a little bit more about and like share like the tools that you're using and and what

Jay Green: day.

Jade Nakabayashi: in Marley you're using in terms of the custom asset workflow? I haven't seen a bunch of that yet.

Jay Green: We're not um it's all in Excel and

Jade Nakabayashi: Oh, you're not. It's all like Excel.

Jay Green: Canva.

Jade Nakabayashi: Can you show me your Excel?

Jay Green: Yeah, because there really isn't anything in Marley to um to build out the custom stuff at this

00:14:24

Jade Nakabayashi: Can you share that stuff with me?

Jay Green: point.

Jade Nakabayashi: Like, can you walk me through like what you have to do in order

Jay Green: Um, right

Jade Nakabayashi: to

Jay Green: out. All right. So, Oh, well, this isn't this isn't um customer, but this is something I do every morning. Every Monday morning. This is our bookings,

Jade Nakabayashi: Okay.

Jay Green: and it shows me from a certain date what was booked in each show for the past week. That way my and I create a pivot table out of it so that my team can go in and send a note to the partners that they that they work with to say, "Hey, good news.

We closed \$15,000 last week, you know, from Cloak, from Incogn, from Outskill." Um, but what I have to do is I have to go into the order system in Marley, run it, and then manually type this all in.

Jade Nakabayashi: O.

Jay Green: So having a great report or something functionality that my team can go into and see their

00:15:46

Jade Nakabayashi: Okay.

Jay Green: and automatically run it for their shows of what closed over the last week would be immensely helpful. Um so that's that. Then very slow here. Very slow. Uh let's see here. see what I can find for you. These are presenting the sponsorship packages that Annie built out um talking about the different pieces um of what a package is, right? would love to be able to see these in Marley that a seller could select it and work off of and obviously be able to price you know if they needed to or why not there again very manual

Jade Nakabayashi: Can you talk a little bit about like what these packages are and

Jay Green: sure so for every show we're not selling just spots or sponsorships in the show we sell trying to create custom packages that are more than that. Um that they can create custom segments in the show that can be sponsored. You can sponsor the studio. You can sponsor the chair, right? If they're going on tour, maybe they can be a sponsor of the tour.

00:17:24

Jay Green: Um you might add social to it. Uh you know, so they post in their social accounts. They might um uh do a special interview or we could include the logo on their show. anything like that, you know, it's anything that's a different than just a

regular host read. Another thing that um we'll work on too, if I can find one here for you. We haven't done it in a little bit. Is is a a sponsor looking for certain something special like Airbnb. This one happens to be Whoop. Um, and asking the question, will you wear a Whoop armband for 30 days prior, right? As part of going through it. And, you know, Annie will create a giant sheet out of this. We'll go to I will go out to all of the shows and get their responses of what they'll do. Same thing for like we did one for trying one for Airbnb. Are you a host of an Airbnb? Have you stayed at Airbnb?

00:18:33

Jay Green: These are all just different things that we need to track and and we want to keep too, right? Because these questions come up all the time, right? We get these things about pets, birthdays, all all that fun stuff. We want to track everything and everything, anything and everything about the hosts.

Jade Nakabayashi: Yeah, I know that they're trying to add like things like granular details about the hosts into the system. Um, and then I've heard that like obviously because custom sales are so custom, it's like difficult to create standardization in the system. Are there certain elements that you feel like are consistent that would be helpful to

Jay Green: Yes. Hold on.

Jade Nakabayashi: be

Jay Green: Absolutely. Not what I was looking for. recreated. Sorry, I'm looking at it here. I haven't gone into it a little bit.

Jade Nakabayashi: Nice.

Jay Green: And this is part of the problem too, right? Because it's kept here. People forget about it. Um, come on. Why is this not coming up?

00:20:18

Jay Green: I'm looking. I'm looking. I'm looking bear with me one second, please.

Jade Nakabayashi: One of the things that I've been asking people is like what do you feel like is really the differentiating factor of daylight? Like what makes us stand apart from you know why why work with us and not someone else? It feels like maybe the way that we handle custom deals is an element of that for

Jay Green: It's an element of that.

Jade Nakabayashi: sure.

Jay Green: So, all right. This is the custom master.

Jade Nakabayashi: Can you show this?

Jay Green: You see there's a lot of different um uh tabs here. Um obviously the summary kind of puts that all together, but it gives us a sense of presenting sponsorship, how much is how much is it, product placement, will they do it, the answers on it, how much it is, right? It puts all that stuff together, big summary of it. Okay, so then there's the summary that puts that all together. Um will they do it?

00:21:24

Jay Green: How won't they do it? What does it mean? Um, this is what really this needs to be in Marley.

Jade Nakabayashi: Yeah. Can you share the talk with me,

Jay Green: Um,

Jade Nakabayashi: please?

Jay Green: what's your email?

Jade Nakabayashi: Jade Nakayashi.

Jay Green: Oh, there we

Jade Nakabayashi: Yeah.

Jay Green: go. I mean, this this has everything that the sellers need. Um, and I think that gets lost a lot because it's it's clunky.

Jade Nakabayashi: Yeah. So, how is this used? Can you like contextualize this tool for me a little bit and like in terms of the

Jay Green: Sure. Yeah. Sure. So, if a seller says,

Jade Nakabayashi: workflows?

Jay Green: "Listen, I need to I want to work with Let's Get Haunted." Well, do they do product placement? Right. You can easily come here and look at the Let's Get Haunted. Of course, I can't find it now. Let's Get Haunted here. Yes, they do product, you know.

00:22:29

Jay Green: See here, product uh sorry, product placement. Yes, they do product placements. Um you can come here and see product placement for Let's Get Haunted should be spot times three. That means what the normal rate card on the spot is should be multiplied by three to get a presenting sponsorship. There's no reason that can't tie into Thomas's master sheet on the rate,

Jade Nakabayashi: Yeah.

Jay Green: right? To instead of saying spot times three, you know,

Jade Nakabayashi: Mhm.

Jay Green: we can almost have like a range of what it should be. Okay. Um, does that make sense? Same thing with like segment sponsorships. Plus, this also labels out what the actual segments are, right? And what they talk about. Some shows have specific segments that can be sponsored, others don't. And they're willing to but they're willing to create some.

Jade Nakabayashi: Has there been an effort to sort of like integrate more of this into the system to date or it's just

Jay Green: Not at this. No, not at this point.

00:23:31

Jade Nakabayashi: like Okay.

Jay Green: We We want to. It just hasn't happened

Jade Nakabayashi: Yeah.

Jay Green: yet.

Jade Nakabayashi: I I feel like like each team has like such a series of little Excel documents and their own goals.

Jay Green: Yeah. Exactly.

Jade Nakabayashi: So yeah.

Jay Green: Exactly.

Jade Nakabayashi: So it sounds like overall I mean just holistically more of this stuff needs to be integrated into the system but if you had like a you know these are the top things on my wish list. What would those be for

Jay Green: getting custom integrated in there.

Jade Nakabayashi: you?

Jay Green: Not just this, but tracking custom um tracking them. I'll I'm still working on my tracker there. I'll send that to you as soon as I have it. Um you know, where things are going, meaning like Annie's got to be able to track the requests,

Jade Nakabayashi: Thanks.

Jay Green: um what's coming to her, what she's working on. Plus, we also want to know what the feedback is from the client so we know what's working, what's not.

00:24:26

Jay Green: Um, being able to get easy reporting for our shows so that I can use it, my team can use it. Um, and really honing in on the onboarding um, process because right now it's it's it's clunky still. Ryan has to send out these um surveys that get fed back in there and it's it's clunky. It's very very clunky and things get

Jade Nakabayashi: with the last like five minutes that we have.

Jay Green: missed.

Jade Nakabayashi: Can you show me a little bit of that flow? How the onboarding process works today? And Marley

Jay Green: Yeah.

Jade Nakabayashi: presumably.

Jay Green: Let me see if I can Are you speaking with Ryan at all or Okay.

Jade Nakabayashi: Yeah.

Jay Green: He's going to be the one to really take you through the onboarding because I mean he lives it dayto day. But you can see here

Jade Nakabayashi: Okay.

Jay Green: business.

Jade Nakabayashi: Middle dwarf. Is

Jay Green: Yeah. Middlef.

Jade Nakabayashi: that

Jay Green: So we have onboarding So here we have Golden State Killer.

00:25:45

Jay Green: This is where, you know, we have our notes. You know, he's got kind of a checklist here that he works on, which is always good. So I can see where in the process um the onboarding is um the launch date of the show, the description of the show. Um

Jade Nakabayashi: But all of those things in the list don't happen necessarily in the tool, right? It's like,

Jay Green: no, this is all manual. This is all this is all manual.

Jade Nakabayashi: yeah.

Jay Green: I guess part of it has to be. Um, but then he has the welcome survey and he Let him take you through the welcome survey.

Jade Nakabayashi: Okay.

Jay Green: The welcome This is about the show. Then there's a survey about the host um that has to be done and it comes off as two. It's it's it's really really really clunky. Um, and the other thing is my team has to be able to do the ad plans themselves. We've got to be able to go in and maneuver quickly um without having to wait on um product.

00:26:50

Jade Nakabayashi: Yeah, I mean that makes sense because you're partnering with the show.

Jay Green: Yeah. And there's a lot of old and Ryan can take it through too. There's a lot of old stuff in here, too.

Jade Nakabayashi: So,

Jay Green: that just doesn't need to be in this onboarding stuff anymore. And it's just it's clunky. Very clunky. Again, it worked at the time and it was developed well. It's just just things that just don't need to be anymore.

Jade Nakabayashi: are the the surveys are just sent out to

Jay Green: They're Yeah, they're emailed out to whoever contact they give us. You know, I'd love to be able to put in an Instagram URL and have the system scrape and automatically get the number of followers.

Jade Nakabayashi: Mhm.

Jay Green: Um, and here's some more survey results.

Jade Nakabayashi: Yeah, it sounds like we just need to clean this up. Like there are things that don't need to be here.

Jay Green: Yeah.

Jade Nakabayashi: This just warrants an audit and partnership with Yeah.

Jay Green: Yeah.

00:27:58

Jay Green: Exactly.

Jade Nakabayashi: All

Jay Green: Exactly. But yeah,

Jade Nakabayashi: right.

Jay Green: Ryan will really take you through that and how it works and said the give you examples.

Jade Nakabayashi: Is there anything else that you feel like I should know? Any like red flags? Any like red tape that I should be mindful of?

Jay Green: Red tape. No, I don't think we really don't have a lot of red tape. Um, red flags,

Jade Nakabayashi: Okay.

Jay Green: you know. I think I think they've done an admiral admirable job based on what they could with Air Table obviously just outgrown it. Um,

Jade Nakabayashi: Yeah.

Jay Green: and um, you know, we just need to make it more fluid and have the different pieces talk to each

Jade Nakabayashi: Yeah.

Jay Green: other.

Jade Nakabayashi: Yeah. It does sound like that that's just really the core of the opportunity is like integrating all these other pieces

Jay Green: Yeah.

Jade Nakabayashi: of technology that people have built on the side to make the tool work for them.

Jay Green: Yeah, exactly.

Jade Nakabayashi: Yeah.

Jay Green: Exactly.

Jade Nakabayashi: All right. Well, thank you so much.

Jay Green: Good.

Jade Nakabayashi: If there's other people reach out.

Jay Green: I I hope this was helpful.

Jade Nakabayashi: Yeah, for sure.

Jay Green: Great.

Jade Nakabayashi: It was Thanks.

Jay Green: Okay, cool. I will talk to you soon.

Jade Nakabayashi: Wait.
