Understanding User Needs w Product (Erin)

Invited Jade Nakabayashi Erin Herting

Attachments 📎 Understanding User Needs w Product (Erin)

Meeting records 📄 Transcript 🎙 Recording

Summary

Discussions centered on integrating sales workflows with new systems to enhance efficiency and replace manual processes.

Sales Workflow Integration Needs

Participants identified pain points in existing manual sales trackers and the need for a unified product system. This transition aims to improve visibility across the organization as scaling continues.

System and Tool Requirements

The team prioritized automating pricing calculations and centralizing the media roster to eliminate version control issues. A decision was made to prioritize live-updated master lists and digitized submission workflows.

Optimizing Sales Operational Visibility

Enhancing the Bob screen with integrated fill rate data will improve inventory management efficiency. Future efforts will focus on CRM implementation to better manage account ownership and sales leads.

Decisions

Aligned

- **Fill rate data integration into Bob** The new product system design will incorporate fill rate data directly into the "Bob" view to reduce the need for switching screens and improve workflow efficiency.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [Jade Nakabayashi] Clarify CPM Formula: Determine the specific formula or logic Thomas uses for calculating net CPM within the master spreadsheet. This information is required to replicate the calculation in the new product system.
- ☐ [Jade Nakabayashi] Integrate Fill Rates: Add fill rate statistics for the past and next 90 days to the Bob calendar view. This integration will eliminate the need to switch between multiple screens during the sales planning process.
- ☐ [Jade Nakabayashi] Enable Live Edits: Build functionality to support real-time editing within the system to replace the current reliance on Google Drive spreadsheets. This change will ensure all team members access the most accurate data at all times.
- ☐ [Erin Herting] Gather Sales Feedback: Consult with the remaining sales team members to gather their perspective on the proposed user interface changes. Consolidate their feedback to determine if the modifications will effectively improve the existing workflow.
- ☐ [Jade Nakabayashi] Update Role List: Update the working document of roles and tasks based on the meeting discussion.
- ☐ [Erin Herting] Review Role List: Provide feedback on the roles and tasks document to ensure accuracy.

- [Jade Nakabayashi] Meet Mercedes: Discuss the papering process and ad operations workflow with Mercedes.

Details

- **Meeting Objectives and Roles:** Jade Nakabayashi and Erin Herting discussed the goal of integrating current sales workflows into the new product system. They focused on identifying pain points, understanding individual roles within the company, and reviewing the specific screens currently used by the sales team to manage their daily tasks ([00:00:08](#)).
- **Request for Proposals (RFP) Management:** Erin Herting explained that their role as a sales planner involves managing RFPs using a manual tracker in Marley. They emphasized that the standard turnaround time for an RFP is 48 hours, a speed mandated by Thomas and Kate to remain competitive in securing deals ([00:01:05](#)) ([00:03:07](#)).
- **Challenges of Scaling Sales Operations:** Erin Herting noted that as the company grows, they are transitioning from relying on established relationships held by Thomas and Kate to managing inquiries from new Fortune 500 brands involving other EVPs like Christine and Jay. They expressed a need for a streamlined system that provides visibility into the statuses of all team members' work to ensure everyone is on the same page ([00:04:04](#)).
- **Centralizing the Media Roster:** The media roster is currently maintained in a Google Drive document that requires frequent manual updates, leading to version control issues. Erin Herting advocated for a live, integrated version within the product system that allows for automatic updates, such as changes to audience numbers, to serve as the single source of truth ([00:06:01](#)).
- **CPM and Rate Calculation:** Sales pricing is derived from a formula using average consumption per episode and net CPM, divided by 1,000. While Thomas currently manages CPM adjustments based on show demand, fill rates, and inventory, Erin Herting noted that the new product system, referred to as Vault, should ideally perform these calculations automatically ([00:08:12](#)) ([00:11:18](#)).

- **Evaluating Sales Screens and Redundancy:** Erin Herting reviewed current screens and identified the "Bob" screen as the most essential tool for viewing real-time availability, rates, and booked inventory. They noted that the "Available Inventory" screen is redundant for their purposes, while the "Ad Plan" screen is considered too confusing, with ad ops being the primary users of the latter ([00:12:14](#)).
- **Exclusivity and Category Filtering:** The Direct AR pivot table is a critical tool for checking category exclusivity, such as identifying if a brand like Butcher Box conflicts with already booked shows. Erin Herting highlighted that manual category labeling is occasionally incorrect, forcing them to rely on memory and detailed checking of show-by-show bookings ([00:16:30](#)) ([00:18:33](#)).
- **Pricing Strategy and Negotiation:** Erin Herting detailed how they use the "Bob" view and fill rate data to determine submission rates, often submitting at prices lower than those listed on the master spreadsheet. They explained that Thomas and Kate maintain high rates on the master list as an aggressive starting point, which is then lowered through subsequent email negotiations with buyers ([00:22:42](#)) ([00:26:03](#)).
- **Vetting and Submission Workflow:** The vetting process begins with sales selecting shows based on the Direct AR pivot table, after which ad ops reviews the selection. Erin Herting explained that after the vetting phase, the responsibility falls on them to submit the proposal and log advertiser responses, such as approvals or declines, in the advertiser field ([00:26:51](#)) ([00:28:52](#)).
- **Enhancing the Bob System View:** To improve efficiency, Erin Herting proposed integrating "next 90 days" fill rate data directly into the "Bob" screen. This would allow the sales team to view availability and pricing simultaneously without switching between multiple screens, though they acknowledged that the detailed show-by-show view should be maintained ([00:31:25](#)) ([00:35:05](#)).
- **Contract and IO Process:** Once a deal is negotiated, the signed Insertion Order (IO) is sent via DocuSign and email. Erin Herting explained that ad ops, specifically Mercedes, manages the manual papering process. A contract is only entered into Marley once the advertiser has countersigned, a status referred to as "pending CSIO" ([00:38:12](#)) ([00:41:32](#)).
- **Handling Holds and Date Shifts:** During the contract phase, deals are placed on hold in the "Bob" view, marked by a yellow status, until the countersigned IO

is received. If dates become unavailable during this interval due to the team's fast-paced operations, ad ops manages the process of requesting date shifts with the brand ([00:41:32](#)) ([00:43:37](#)).

- **Post-IO Responsibilities:** Following the IO, the responsibility shifts to ad ops to handle product shipping to hosts and the collection of copy points. While Erin Herting maintains visibility into these steps through email, they noted that their direct involvement concludes once the IO is passed to ad ops ([00:45:47](#)).
- **Future CRM and Scaling Needs:** To support the company's growth, Erin Herting recommended implementing a CRM system to track sales account ownership and sales leads. They identified the most urgent priorities for the new system as creating a live-updated master list, digitizing the RFP process, and streamlining the availability and fill rate viewing process ([00:48:39](#)) ([00:50:44](#)).

Understanding User Needs w Product (Erin) - Transcript

00:00:08

Jade Nakabayashi: Hello.

Erin Herting: Hi,

Jade Nakabayashi: Hi. How are you?

Erin Herting: good. How are you?

Jade Nakabayashi: Well, thank you so much for taking the time to chat with me.

Erin Herting: Yeah, of

Jade Nakabayashi: Um, hi, I'm Jade.

Erin Herting: course.

Jade Nakabayashi: I'm helping Sam and team out with product. Um,

Erin Herting: Okay,

Jade Nakabayashi: I'm just like doing the rounds and meeting everyone and trying to just get a sense

Erin Herting: great.

Jade Nakabayashi: of the roles that everyone plays and a more substantiated understanding of roles in the holistic system. Um, I had like some specific questions, but this is really just time for you to sort of like, you know, talk me through your pain points, talk me through like the new things that you would like to see in product. Um, and then as well as like I'm just trying to get an understanding of how everything works. Um, I have probably some sales specific questions that we can get to that you might be able to help me out with.

Erin Herting: Yeah,

Jade Nakabayashi: Um, there are some screens that I'm kind of like, what are these for?

00:01:05

Jade Nakabayashi: Are they redundant?

Erin Herting: definitely.

Jade Nakabayashi: do we need to maintain them? Um, but would love to just get a general like sense of you and your role and all of that first. Um, and then before we get started, would you mind if I recorded the session just for my own reference?

Erin Herting: Oh, of course.

Jade Nakabayashi: Well, thank you so much.

Erin Herting: Yeah. Okay.

Jade Nakabayashi: Okay.

Erin Herting: Um, okay. Well, I guess to start with my role, so I'm sales planner. So, really helping uh the sales team with all things um uh sales and mostly that's being that's for me is RFPs. So,

Jade Nakabayashi: Thank

Erin Herting: we we get requests from different brands and agencies that want to work with us.

Jade Nakabayashi: you.

Erin Herting: And so, I log all of my um RFPs in Marley right now. Um and it's kind of this manual tracker that I'm showed us, you know, a little bit of the system and they're trying to make it kind of a pre not a pre-made RF, like an RFP builder essentially.

00:02:09

Erin Herting: Um, and because the RFP is the first step step of the sales process and then I know we want we want the new product system to RFP all the way through the signed IO um or the assigned contract that kind of to to be um basically for for the new system to kind of see the whole process through the whole sales process. Um,

Jade Nakabayashi: Yeah.

Erin Herting: so I guess I I could do Would it be helpful if I showed you what I use in Marley now the

Jade Nakabayashi: Yeah.

Erin Herting: most?

Jade Nakabayashi: It would be a super helpful

Erin Herting: Oh, okay. Okay,

Jade Nakabayashi: thing.

Erin Herting: let's start there. I'm like, how do where do we start? Okay, so basically this is just a little cheat sheet that I made for myself. Um,

Jade Nakabayashi: Mhm.

Erin Herting: that shows all of the RFPs. Like this is what I'm working on now. Um, basically I enter the and and we have a status column. So basically um in the sales process we get an RFP.

00:03:07

Erin Herting: I enter it here. This is my working list and it's basically like here's the brand and we vet the brand right

Jade Nakabayashi: Mhm.

Erin Herting: when it comes in um for the shows that we think are a good fit. And then the shows have 48 hours to respond to the vet. And then the 48 hour window is basically how long we have to complete the RFP. So um after 48 hours, that's why the due date is always 48 hours. Sometimes a brand will give us a little bit more time. Um but if they don't give a due date, we just assume 48 hours is the turnaround time. Um and so that's kind of like if there's no due date,

Jade Nakabayashi: Okay.

Erin Herting: I will just we will just submit it in 48 hours. Um just because Thomas and Kate um it's just a very fast they just want us

Jade Nakabayashi: Okay.

Erin Herting: to submit shows in a timely manner because the faster we submit the faster it's likely that we will get the get the deal basically.

00:04:04

Erin Herting: Um so they just really want it to be a quick turnaround um and keep us competitive. Um and then I also will enter like shows that we submit. I don't really think this is really just for me. Like I don't know. I don't think anyone else is really in here like tracking. It's just this is just my way of tracking. Um as the company's grown, you know, now we have not just Thomas and Kate, we have Christine and Jay and more kind of EVPs that are trying to bring in they're trying to bring in more Fortune 500 brands. Um,

Jade Nakabayashi: H.

Erin Herting: whereas Thomas and Kate are have like built the built the sales team and are using their existing connections with like agencies who rep

Jade Nakabayashi: Yeah.

Erin Herting: brands. So, I think as we grow, we just need a way where no matter who you are, like how your connection is to the sales process, we can all be on the same page. And like I've been here kind of while it's been growing.

00:05:06

Erin Herting: And so kind of trying to figure out,

Jade Nakabayashi: Yeah.

Erin Herting: okay, someone who's new and actually, you know, how can someone who's new come in and see where all the statuses are and like what's going on? Um,

and right now like this this is just me like plugging things in. But if if it was just if it was more streamlined of, you know, anyone could come in and see, okay, what are what's Jay working on? What Christine's working on? And they all have their different relationships and their different like kind of ways of working. But um but given that how can we all just have visibility? So I think that's like a huge thing of just you know that's that would be great. Um,

Jade Nakabayashi: So you're you're owning the RFP process,

Erin Herting: and yes,

Jade Nakabayashi: right? Do you?

Erin Herting: that I'm like the main person who's who's doing it for

Jade Nakabayashi: And then that that looks like then you'll go in and like duplicate the uh the rust the media roster and then copy over

00:06:01

Erin Herting: Yes,

Jade Nakabayashi: the shows that pertain to like what's been articulated in the RFP,

Erin Herting: 100%. So, like an average day like Okay.

Jade Nakabayashi: right?

Erin Herting: So, I would go over to pull up Thomas's m like a master that we kind of update on like every week. We would love this to be like we keep them in drive right here. Uh, oh wait, sorry. I don't think my my screen is sharing, so I'm going to stop share so I can I'm probably pulled up a new screen and just wanted to share. Okay. So, for right now, we um most updated does.

Jade Nakabayashi: the media, right? And then Thomas owns the media roster, right?

Erin Herting: Yes. So,

Jade Nakabayashi: Okay.

Erin Herting: right now we edit it so often that it's in Google Drive. Um, but ideally we would edit a live version in Marley. There is a version in Marley that I've been updating to match Thomas's numbers, but it's like he updates it so often that um that it's not like

a uh the most accurate all the time um just with how fast we're updating and sending proposals and things like that.

00:07:13

Erin Herting: So in anal world the source of truth would be in Marley and would be in in drive. Um so like for example like 720. So this was updated on Monday and this is like the one that we are actively removing shows adding shows. Oh wait I don't think it I don't think it um it doesn't want to share my screen. Um, so yeah. So just getting this to be like in there's just a live update. So instead of Thomas doing his Google Drive update, we do the in the port in the in the product um, whatever it is. So if he comes in and he edits, oh, Sean Ryan's audience went down, it will like automatically update for everyone in the system.

Jade Nakabayashi: Mhm.

Erin Herting: And I think that's just kind of like a live edit update process. That would be that would be great. So we're not we're not relying on a doc.

Jade Nakabayashi: Right.

Erin Herting: Um so

Jade Nakabayashi: Of course. But so the CPM is that manually

00:08:12

Erin Herting: yeah.

Jade Nakabayashi: calculated? I know.

Erin Herting: Yes. So yeah. So it's a formula. Um okay.

Jade Nakabayashi: Yeah.

Erin Herting: So the formula is um the formula would be the consumption. So K so the average consumption per episode um times the CPM which we work in net so it would

be net and then divided by a thousand and that is what what the rate is. So that's the formula that's in that's this that creates this. And so what Thomas will do, what the sales team does is we up we we uh change the CPM and that changes the rate. So you would come in and you would say, "Oh, Oh, I'm going to lower Shawn Ryan to 12 and then that changes the rate and lowers the rate. Um, so that's kind of how we do it is like we have that formula in place and then if you alter the CPM then um because it's cost per thousand downloads. Um, so if you alter the CPM then that that will change the

00:09:24

Jade Nakabayashi: What determines that cost though?

Erin Herting: price.

Jade Nakabayashi: Like I know that like fill rate, it's sort of contingent upon fill rate, right? Like it changes.

Erin Herting: Yes. So it's again down like downloads changing downloads would if that

Jade Nakabayashi: Yeah.

Erin Herting: fluctuates which it does week by I guess not week by week but it does fluctuate that would change and then also um that would change and then also it is fill rate. So, it's kind of a formula of of the sellout percentage. Um, are do they have a lot of available inventory and what's and is the show re

Jade Nakabayashi: Mhm.

Erin Herting: basically is the show really in demand? Um, Sean Ryan is a special one because he has a um actually a minimum with us. Um, so that's not the best example because he is a kind of a special situation and so is the weekly show because he's a se they're both kind of in the celebrity tier. Um, but other shows it's just very much like are they very sold out.

00:10:23

Erin Herting: So, if we were to go to Marley, that's where the fill rate comes in. Um, which is in which is a field in here.

Jade Nakabayashi: But there is like when you click on net CPM a cell in there,

Erin Herting: Um,

Jade Nakabayashi: there is no formula for that. Right.

Erin Herting: so not for um not for the CPM but the rate.

Jade Nakabayashi: Right. That makes sense to me,

Erin Herting: So,

Jade Nakabayashi: but I I don't understand how you're getting the net CPO number. Like I know that it's based off of consumption and fill rate, but

Erin Herting: Yeah, if you you could back into the CPM as well.

Jade Nakabayashi: like

Erin Herting: Um if you did um let's see if you flipped the if you flipped the the calculation. Um but yeah, I see what you're saying if you didn't have the if you didn't have the CPM.

Jade Nakabayashi: Yeah.

Erin Herting: Um yeah, I mean I'm trying to think of how you would flip it. I guess I'm always working from an existing CPM and then backing into the rate.

00:11:18

Erin Herting: Um, so that probably would be a Thomas question.

Jade Nakabayashi: Okay. Because I know that Thomas owns this doc and I get the sense that he's manually like updating what

Erin Herting: Um,

Jade Nakabayashi: the net CPM is by like an algorithm in his brain. So I'm just trying to pin down what that algorithm is, right? Because if we want to pull this into vault, like the new system, in order for it to be meaningful, it like should be able to do that,

Erin Herting: It should. Yeah,

Jade Nakabayashi: right?

Erin Herting: exactly. And like I know that it's it's basically how how in demand is the show? Is there a high fill rate? Is there not? And that combi the supply and demand combined with the show's consumption. Um, is it fluctuating? So, it's like that's the general formula. Um, but yeah, but then again, it is very much like like his algorithm, I guess

Jade Nakabayashi: So maybe this is it. I'm going to share my screen really quick because I had a question about a couple of screens in particular.

00:12:14

Erin Herting: you

Jade Nakabayashi: Can you can you see me? Okay, cool. So the this is like the fill rate screen and this is the available inventory screen. And they seem kind of redundant to me,

Erin Herting: Mhm.

Jade Nakabayashi: but I I'm just trying to figure out like what are these screens used for? Can they be consolidated?

Erin Herting: Yeah. So, I actually Which ones do I Okay.

Jade Nakabayashi: Do you use these at all?

Erin Herting: I use available inventory. I do not use. Um, so the screen that I use for that is actually, do you know about the Bob screen? Okay. So me,

Jade Nakabayashi: Yes.

Erin Herting: so the bob was literally designed because we need to see like basically I don't think available inventory is that helpful for sa for sales. I don't think Thomas uses that at all.

Jade Nakabayashi: Okay.

Erin Herting: We use Bob because we need to see the avails in real time and like a calendar view. So for me, when I give aails for an RFP and I say available dates, I'm only using Bob.

00:13:24

Erin Herting: like I basically live in that calendar view.

Jade Nakabayashi: eat.

Erin Herting: Um and that's like constantly up on my screen. I would say I use fill rate, the Bob avails view and um and then the direct AR pivots. I don't know what are above. Sorry,

Jade Nakabayashi: Oh,

Erin Herting: I can't see your screen.

Jade Nakabayashi: I think sorry.

Erin Herting: Okay.

Jade Nakabayashi: This is the new This is like us trying to translate this stuff into the new

Erin Herting: Yeah.

Jade Nakabayashi: system.

Erin Herting: Okay. So, I don't use this.

Jade Nakabayashi: Um,

Erin Herting: I don't use the ad plan either because to me it's too confusing to look at. Um,

Jade Nakabayashi: okay.

Erin Herting: so I use I would use fill rate.

Jade Nakabayashi: But you do use this, right?

Erin Herting: I use I use the previous next to see like what's the fill rate percentage. So, that screen's really helpful. Um, and then I would say instead of ad plans, I use the Bob avails view because I can literally click in to see available weeks and it shows me what rate it's booked at.

00:14:26

Erin Herting: So I can see what the rate is. It shows me available inventory by the week and it also tells me

Jade Nakabayashi: Mhm.

Erin Herting: advertisers are currently booked. um because we have some exclusivity that we look at brands.

Jade Nakabayashi: Mhm.

Erin Herting: We can't book if Yeah. So, we just need to know what's booked, what's the rate, and what's available. And that bo that like Bob view is what we called it shows all of that on one screen for every so.

Jade Nakabayashi: Yeah,

Erin Herting: So, I think getting

Jade Nakabayashi: but you're not actually doing the ad planning. in Bob right like ad ops is doing that you're just referencing it so that you can

Erin Herting: Yes. Yes.

Jade Nakabayashi: pull together the RFP in a meaningful way is that fair

Erin Herting: Exactly. Yes. Totally. So,

Jade Nakabayashi: okay

Erin Herting: I'm kind of looking at it, pulling available dates and looking at cate the whole category exclusivity

Jade Nakabayashi: Mhm.

Erin Herting: factor um when I'm doing the RFP.

00:15:20

Erin Herting: And I would say previous,

Jade Nakabayashi: Yeah.

Erin Herting: next, fill rates, the Bob calendar view that shows the rate, what's booked, and the avails for that show. Um, and then I'm also using um the the pivot table for me is is key. Um, so the PI because the pivot table I use for um exclusivity purposes. So I don't know, wait.

Jade Nakabayashi: Sorry. Yeah.

Erin Herting: Um,

Jade Nakabayashi: Can you share in the pivot

Erin Herting: okay. Yeah. So, I would say when I like joined sales,

Jade Nakabayashi: table?

Erin Herting: like this was the number one most important thing that like I I was using. Um, so let me Okay, so what screen am I on? Sorry. Okay, so many screens open right now. Um, let's see. Where's our little Okay,

Jade Nakabayashi: You're showing the media roster right

Erin Herting: so I'm sharing this. So,

Jade Nakabayashi: now.

Erin Herting: let me um Okay, sorry. Okay, so it's the direct AR pivot.

Jade Nakabayashi: Oh, is it the direct AR pivot table?

00:16:30

Erin Herting: Oh my gosh. So, sorry. Oh, it meeting. You know what? It does that weird group. Okay, so I'm going to stop share and then reshare.

Jade Nakabayashi: I know. I'm I'm so guilty of a million tabs open all the time at the same

Erin Herting: There's a lot of Okay. Um, so now what I'm gonna do is I'm gonna go into Okay,

Jade Nakabayashi: time.

Erin Herting: got it. Okay, so pivot table. Here we go. And then I'll share this with you right now. Here we go. Okay, so this is like very I would say this is like maybe one of the most important things when I'm doing RFPs and I know that Thomas and Kate are also

filtering through this. Um, so basically it's just like for example, Butcher Box, um, is a big brand I that I am working on right now. So, oh, I spelled it wrong. Um, so basically, you would come in here and you say, "Oh, I just got an avail uh for Butcher Box." Oh,

00:17:25

Erin Herting: my my computer is taking a minute. Um, and then the number one thing is what um what shows are available in this category? So, we kind of recently did this categories, which which really does help. Some It's hard because some brands are not labeled correctly in the system and so they don't pull everything. So, we're literally kind of going off memory of like what we already know is booked. Um, so for a butcher box that's a meal kit. So, I would want to go meal kit and then it would show me all of the shows that are currently booked. Um, and I have this filter on for for a year. Um, because I just like to see what's available. So, basically, we're in July. And so, I would I would through this view, I could say, let's get haunted. I'm going to take off the submission. this Jeff Girtzman. I'm gonna take him off because he's he's booked on a meal kit. So, basically just using this view to Yeah.

00:18:33

Jade Nakabayashi: Oh, I see him.

Erin Herting: Um if they have it like this basically shows me, okay, they have an annual so I need to remove the weekly show with John Stewart. I need to remove you should know um because that would be a category conflict. Um, and so if they only have one spot booked, then we're actually open because it takes three consecutive spots booked to claim exclusivity. So that's why this view is so important because I can say,

Jade Nakabayashi: Mhm.

Erin Herting: "Oh, Sean Ryan, he only has August and then October." So he's actually Sean is actually open technically. He's not blocked. Um, so I could submit him to

another meal kit brand. um and that would be safe, but for someone like Let's Get Haunted, that would not be safe because they have six months booked. Um so they're blocked in the category for meal kits. Um so it does get a little technical with that. Um so that's why this is so important um to look at and we need to be able to kind of look at as many shows as we can on one screen to kind of like just look who's open.

00:19:46

Erin Herting: Um um so yeah, so I would say that's this is very important and this is like the first thing I do when I get a a um a brand request is come to this screen and then I can narrow down the master list based on who's available using this screen. Um yeah, so that's like the number one that's like the first step basically is narrow down look at

Jade Nakabayashi: Okay.

Erin Herting: competitors, look who's available in the category, like what shows available in the category. Um, and then you can kind of filter down even more. Um, like if I really don't know, I would say, "Oh, I think Sean's actually booked on a on a on a meal kit." So, I'm going to look at his everything he has booked and just go by show. And then I can just see like this like, okay, he has annuals with Roka, superpower, Sundays, and I just go down the line if I like really want to be sure. Um cuz sometimes the categories are I think they're just autopop populated from a previous from like previous uploads basically.

00:20:52

Erin Herting: Um,

Jade Nakabayashi: Mhm.

Erin Herting: so I'm just I'll just come in here and be like, "Okay, I'm just going to look manually um at like month by month what's booked. Um,

Jade Nakabayashi: This is super helpful. Can I ask you to sort of like talk through in the same way the fill rate screen and

Erin Herting: yeah.

Jade Nakabayashi: how you're using that to like factor into making these

Erin Herting: Okay. Yes. So, let's go into Okay,

Jade Nakabayashi: decisions?

Erin Herting: this one. Okay. So, unplanned. So, okay. So, next 90. I mean this I'm not using as much like on the like case by case by case.

Jade Nakabayashi: Okay.

Erin Herting: This is more if um like I would say in the RFP process I'm not necessarily using this. This would be more if I'm um actually that's not true. Like basically I would use the pivot table to narrow down my options and then and then I would

Jade Nakabayashi: H.

Erin Herting: use this at the final step of how's pricing looking.

00:21:50

Erin Herting: So then I my um like what do I have unplanned prices?

Jade Nakabayashi: Okay.

Erin Herting: I'm actually looking at my master now and I'm like okay we have um unplanned at a \$40 CPM and so then I would actually go to Bob here. Sorry. Oh, can you still see my screen? Okay, cool.

Jade Nakabayashi: Yeah.

Erin Herting: So then I would go to unplanned. This is how I look at avails. It's kind of a little bit there's a lot of steps right now, but so I I just go um view avails. Okay. Is it still It just went to Bob. Is that showing?

Jade Nakabayashi: I don't see. I still

Erin Herting: Okay. Okay. So, let me unshare my screen.

Jade Nakabayashi: see

Erin Herting: I'm just going to stop sharing. Reare. So yeah, this is the screen that like we're really using like

Jade Nakabayashi: plan. All right.

Erin Herting: constantly because um it's like the live view of the rate, what's booked,

00:22:42

Jade Nakabayashi: Right.

Erin Herting: and it's just all in one view. Um which is super helpful. So like I could see, okay, so I'm about to submit unplanned on an RFP. So let's see what it's currently booked at. So, um, okay, we sold Square for 6,000,7,000,7,000. So, I'm and then Shopify 4,000. So, I'm kind of getting like an average rate view looking at this, which is really helpful.

Jade Nakabayashi: Right.

Erin Herting: Um, and then I could say, okay, it's also looking fairly sold out right now. So, I'm going to go on the higher end of this. Like, I'm not going to go 4,000. I'm going to go I'm going to go higher. probably at a median of like maybe 6,500 because there are some 7,000s in here. And I can also say and then you would go back to the fill rate screen.

Jade Nakabayashi: Yeah.

Erin Herting: Um and you would say okay what was the fill rate for unplanned um and it would show you next 90 is okay 70 77. So that's like that's like fairly high almost 80. And when I'm looking at the avails, it's looking pretty full from like from this view.

00:23:58

Jade Nakabayashi: Okay.

Erin Herting: Um, so I would, so then that helps me price it of like, okay, I'm going to submit this at like a 6,500 rate, which if we go into um, so he has it at 10,000 cuz we're he's trying to like upsell, but like I could just use that as information to say, okay, maybe I'll submit it at 6,500 or 7,000. Um, like

Jade Nakabayashi: So even it's even though it's 10 in the in the master Excel, that's what you're talking about, right?

Erin Herting: Yeah.

Jade Nakabayashi: you're going to submit it at a different rate because you're doing your

Erin Herting: Yeah.

Jade Nakabayashi: math using the fill rates and Bob.

Erin Herting: Yeah. Yeah. I Yeah. So, that's when it gets it gets really case by case.

Jade Nakabayashi: Okay.

Erin Herting: Um, and then of course like Thomas might have a slightly different and then Kate might have a slightly different view, but um, but ultimately yeah, it's kind of like um, how sold out are we? How what's what's kind of the current kind

Jade Nakabayashi: But how come it's a is it like it's just how come it's a different price like based on what

00:25:04

Erin Herting: of

Jade Nakabayashi: Thomas has and what you the math that you just did is just that your knowledge is more up to date or is it just like you guys have different ways of doing

Erin Herting: um

Jade Nakabayashi: things or is it like RFP?

Erin Herting: yeah I mean I ultimately ultimately it's like his his call.

Jade Nakabayashi: Yeah.

Erin Herting: I think him and Kate are like the like most, you know, like they what they say goes most of the time. Like I might even like say,

Jade Nakabayashi: Yeah.

Erin Herting: "Hey, I'm thinking like 65. I'm thinking like, you know, 7,000 for this just based on like the fill rates and the ad plan. Like what do you guys think?" And then it might like come down to that.

Jade Nakabayashi: Yeah.

Erin Herting: I think he goes really he'll go really high on the on the master just as like

Jade Nakabayashi: Okay.

Erin Herting: a to push.

Jade Nakabayashi: To push

Erin Herting: Yeah. To like not underell. Um, but then also I'm like, well, if we want to sell it, we want to kind of be more in these ranges.

00:26:03

Erin Herting: Um, so,

Jade Nakabayashi: Mhm.

Erin Herting: and then it or we'll submit it high and the brand will come back and say, hey, can we go lower? And we usually end up going lower.

Jade Nakabayashi: Yeah.

Erin Herting: Like I think what's on the master is really high just to kind of set that standard. And then there will usually be an email thread of negotiations and it will end up coming down to let's say 7,000 or um so there is like a little email negotiation back and

Jade Nakabayashi: Okay.

Erin Herting: forth that happens after this whole process too. Um which is why you're seeing such a discrepancy. You're like wow like 10,000 to 7,000 but it kind of comes down to a little email back and forth.

Jade Nakabayashi: Right. Because you're negotiating a contract.

Erin Herting: Yeah. Exactly.

Jade Nakabayashi: Like that makes Yeah.

Erin Herting: So, we're trying to get the highest rate, but we're also wanting to make the make the, you know, we want them to buy it. So, um,

Jade Nakabayashi: Thank you.

00:26:51

Erin Herting: so it's kind of like a little push and pull, but I think I think just I think I think the direct AR are the this Bob ad ad view and then the fill rates are like a a a good calculation from my view of like how you would how you would just submit pricing and then and then go from there and then it's like the negotiation with the buyer.

Jade Nakabayashi: Yeah.

Erin Herting: Um but but yeah, I think those three screens are are great. And then the other thing which we didn't really go over is just like the basics of I will go into the advertisers and literally log their responses um of what they said and I'll enter that into the RFP. And that's like a huge part of my day is just being in the advertisers field. Did they approve? Did they decline? And like I'm also going back and forth from that page to fill out the RFP with with their with the host comments like I approve Butcher Box. Love them. and like that lives in the advertiser field.

00:27:53

Erin Herting: Um, so I'm also con toggling between that as well. Um,

Jade Nakabayashi: Is that like the That's like the vetting response.

Erin Herting: that's vettings. Yes. So, am I still sharing? Yeah. Um,

Jade Nakabayashi: I'm

Erin Herting: so I'm going to stop here and then I'll just show you. Yeah.

Jade Nakabayashi: sorry.

Erin Herting: So, it's basically um go into direct AR, how are we looking with competitors? And they'll narrow down the shows that I'm selecting. Um, like if we were going to do one right now.

Jade Nakabayashi: So like the division between sales and ad ops for vetting is it like adops is

Erin Herting: Okay.

Jade Nakabayashi: instigating the process of vetting and then you're copying that stuff over and to the RFP and solidifying the process like I'm still a little working on like because I

Erin Herting: Yeah. Yeah.

Jade Nakabayashi: thought that vetting was owned by adops but it's like very clear that you're doing it too sort

Erin Herting: Yes. So, we're So, we're doing it and they are um I'm trying to think of an email that I could just show you.

00:28:52

Erin Herting: Um Okay, so why don't we just go into my inbox? Actually just did one of these. Um see, email. Okay. Yeah. Okay. Send. So, so let's go into a vetting. Um Okay. So, basically, um let me share my screen. I just found one. Oh my gosh, so many. I think this is this is the email I want to show you. Okay. Yeah. So, see, it's like the the request came in and then Kate goes, um, Kate selects the shows that we want to vet, which is what I would also do in this situation. So, and we would use the direct AR pivot table to do that and say what shows are available in the category. We sales choose the shows and then we add uh we CC adops say ad ops please vet these shows.

Jade Nakabayashi: Okay, that makes sense. That's really helpful. That's clear.

Erin Herting: Sales is selecting. it using the direct air pivot ad ops actually does it and then but then but then the chain is on sales that in 48 hours it's then on me to um then I would submit.

00:30:13

Erin Herting: So like if you see down the chain I came in and I submitted this one. So, I said, "Here's the submission attached." And then it's it's attached. And I went into Marley and looked who approved.

Jade Nakabayashi: Mhm.

Erin Herting: And then I also one more time will normally double check the pivot. Are we really are we sure we're good on competitors? Um, and I went through and looked at um Bob and gave the avails as well. Um and then also did the little did the rates exercise of um how are we looking on rates and like submitted them based on the bob based on the fill rate etc. Um, so that's kind of like that's kind of the process, but um, is there any part of that that like you want to like look more go more

Jade Nakabayashi: I wanted to ask for the fill rate. Is it like seeing it that way is really important to you like in the view how it is today or is it like could that stuff be migrated to Bob

00:31:25

Erin Herting: I actually think it could be migr for me. I I think Thomas would agree.

Jade Nakabayashi: like

Erin Herting: I mean, I don't want to speak for him, but I remember like the making of the Bob in that view was really important to him. Like seeing it all like that, seeing with the rates, seeing the avails, seeing it all in one screen because he he is mo him and Kate are moving super fast. So the less that we have to like click to all these different screens um and the more it's just like oh he can see like rate fill rate sold out date like see it all in one

Jade Nakabayashi: Yeah.

Erin Herting: screen I think is helpful if there was a way to do that. Um I think the direct AR can stay in its own separate field because it is like it is a comprehensive view and it's great to be able to see

Jade Nakabayashi: Yeah.

Erin Herting: it.

Jade Nakabayashi: just the pricing over time, right? But the fill rate over time seems

Erin Herting: Yeah. I think the fill rate could be if there was a little um maybe another

00:32:15

Jade Nakabayashi: like

Erin Herting: box um in Bob that was like fill rate you know next 90 or something like that and it wasn't it own separate again

Jade Nakabayashi: Yeah. Okay.

Erin Herting: I mean I would want maybe K other sales people to weigh in but like from my view I think that would be helpful for sure because it is kind of a formula of all those things the pivot table can stay its one page, but everything else could be maybe wrapped into that view. Um,

Jade Nakabayashi: Mhm.

Erin Herting: fails to make it a little bit quicker. Um, yeah, that's a that's definitely a thought. Uh, Um, again I would I think Bob is just like so key.

Jade Nakabayashi: Oh yeah, that's what I'm hearing from like everyone is that I

Erin Herting: Yeah. Like I mean from sales though like I'm not in adops.

Jade Nakabayashi: mean

Erin Herting: Um and I so I think I think ad ops I don't want to speak for them but I think they use the ad plan. I just don't use the ad plan because it's not really it's too confusing um for me to like look at what I'm trying to get from it.

00:33:24

Erin Herting: Um but again adops I think yeah I think they might use that. Um

Jade Nakabayashi: Yeah, I was talking to them and they said that there are like a couple data points in there that are important to them,

Erin Herting: but

Jade Nakabayashi: but that they could probably live somewhere else.

Erin Herting: okay okay

Jade Nakabayashi: But I just wanted to make sure that like you all weren't using.

Erin Herting: honestly no I I do not I'm I go to Bob for that information.

Jade Nakabayashi: Okay.

Erin Herting: Um just the Oh,

Jade Nakabayashi: And then sorry, go ahead.

Erin Herting: no. That was all I was going to

Jade Nakabayashi: You said fill rate next 90.

Erin Herting: say.

Jade Nakabayashi: If we can like pull I don't know, maybe there's like a panel that comes up when you click on a something and it's the rate next 90.

Erin Herting: Yeah.

Jade Nakabayashi: Is does the past matter to you at all?

Erin Herting: Um, it does.

Jade Nakabayashi: Yeah.

Erin Herting: It does. Yeah.

Jade Nakabayashi: Okay.

Erin Herting: Because it was like Yeah.

00:34:14

Erin Herting: It's like I think past and future. Um, maybe f I don't want to say future more.

Jade Nakabayashi: Okay.

Erin Herting: I mean I look at I look at future because it's like okay is it sold out the next 90 days? If it is then we would keep the price high you know if it isn't we would we would let

Jade Nakabayashi: Yeah. Just to see the trend really.

Erin Herting: it just a trend but also the the last 90 are also important of oh this show has been sold out for the last two months and so you know it's high in demand right now is like a selling point that you could say. Um, so both I think for the sales narrative are important. Um,

Jade Nakabayashi: Okay.

Erin Herting: I don't want to say

Jade Nakabayashi: But you're saying that like it would maybe it could be more helpful for your workflow if we could integrate that into Bob's somehow because you don't necessarily need to switch to the screen, right?

Erin Herting: exactly.

Jade Nakabayashi: Is it important to be able to see like the shows fill rates alongside each

00:35:05

Erin Herting: Yeah. Um, yes.

Jade Nakabayashi: other?

Erin Herting: I'm Um, I think so. Yeah, I think so. I think that would be helpful. Um, I'm actually gonna click into Bob right now and just kind of poke around of like how any show Let's go to unplanned you avail. Okay. Okay. Yeah, if it was listed even like up here

by the show name like next 90, previous 90, so that while you're on this screen, you can look up. You're looking at the rates and then you're also looking at the fill rate on the same screen.

Jade Nakabayashi: Yeah.

Erin Herting: I think that kind of killed two birds with one stone. and make this even

Jade Nakabayashi: But then like for here we're just seeing one show,

Erin Herting: faster.

Jade Nakabayashi: right? So like the ability to see multiple shows in this view and like the fill rates of I don't know if this would

Erin Herting: I'm like, would that be too much though?

Jade Nakabayashi: be

Erin Herting: I'm like wondering. Yeah, because I think you still want to keep it show by show because you want you want to um sometimes

00:36:20

Jade Nakabayashi: Yeah.

Erin Herting: we have to do ex episodic exclusivity. So you want to see um the advertisers by literally by mid roll and you want to see what they're booked at by mid roll. So you kind of want to keep this level of detail. I think if we were doing every show that would be like too much on one screen. Um but at least I think the fill rates up here or like somewhere on the screen would be really helpful.

Jade Nakabayashi: But would you still need a view somewhere else so that you could compare the fill rates of individual shows?

Erin Herting: Um, yes, you still would. So, yeah,

Jade Nakabayashi: Okay.

Erin Herting: and I think that's where the Bob I mean the Marley screen is helpful.

Jade Nakabayashi: Yeah. Yeah. Yeah. Okay.

Erin Herting: I mean, so yeah, I don't want to say, "Oh, no, that would be too much." But I think the level of detail we can see on here per show is like is really important. Um maybe maybe it's like the fill rates listed and then you

00:37:16

Jade Nakabayashi: Mhm.

Erin Herting: could you could back out and even like on here. Oh, I have the drop down.

Jade Nakabayashi: Mhm.

Erin Herting: I don't know why. Oh, it's showing that. Okay. Even on this dropdown like is it is it listed on next to the show on their drop down of like

Jade Nakabayashi: Yeah. Maybe it's like the screen before this or something,

Erin Herting: what they're

Jade Nakabayashi: but I'm hearing that like that view as it exists is important today. Like the fill rates view, it just feels too far away from like where you're doing most of the

Erin Herting: Yeah. Yeah. I think that's a good I that sums it up.

Jade Nakabayashi: work.

Erin Herting: Yeah. I think that's a good um It does feel like whoa, where where is that? It's like away we got to go way back.

Jade Nakabayashi: Yeah. Yeah.

Erin Herting: Um so it feels a little bit far. Um but but yeah. Um okay.

Jade Nakabayashi: Um, I I know we're almost at time.

00:38:12

Jade Nakabayashi: I want to like give you the space to be like,

Erin Herting: So

Jade Nakabayashi: is there anything that we didn't talk about that you feel like we should? But I also wanted to ask and like I could maybe drop more time on your calendar if that's okay eventually. But like then what happens? You know what I mean? like the IO and then you are sort of like going back and forth with the IO and like how does sales play into

Erin Herting: yes. So then um the IO so we basically there's an email chain where the negotiation

Jade Nakabayashi: that?

Erin Herting: happens where they decide on a rate. So they'll say hey can we get a how about a \$15 instead of a \$20 CPM and then um you know we'll say oh no because of the sellthrough rate the lowest we can go is 20 and then it's like then the buyer says okay that we'll make that work. They send through the IO via docu. Docu Sign and then Thomas will Thomas or Kate will sign it and

00:39:00

Jade Nakabayashi: Mhm.

Erin Herting: then they an email will come they will forward the signed IO document via email to um to ADO ops when all parties have signed and then um and it's basically through email and then ADO ops will confirm receipt in email and then ADO ops Mercedes particularly um is like she is the queen of papering. So, she will do her papering process, which I don't know if you've met with her yet.

Jade Nakabayashi: I don't

Erin Herting: Um, okay. Yeah. So, then we have a separate Google sheet that is um Okay.

Jade Nakabayashi: know.

Erin Herting: Wait, do I still have access? So, I was papering for a little bit, but then um Mercedes kind of really they said she's going to own it. So, I kind of backed off helping paper. Wait, I um let me see. But basically um she has like an IO checklist of how she will add enter the order literally into Marley um and she will just manually enter the IO and

the details. Um once all parties the advertiser and Thomas or Kate have signed um so the signing happens via docu sign and email and then ad ops will manually enter it into Marley if that

00:40:22

Jade Nakabayashi: Okay. So, I uh like papering does not happen in conjunction with like scheduling the

Erin Herting: makes

Jade Nakabayashi: ad plan, right? Nothing is inserted into Marley until the contract is like fully signed and

Erin Herting: exactly. Yeah.

Jade Nakabayashi: Okay.

Erin Herting: So it's fully sign Yeah. signed by us and it's also has to be signed by them. Um and then it is entered into morally. So yes, we don't we don't want to enter anything that's not signed. Um because then the revenue is also being entered. So um we want to make sure that it's fully signed before that revenue is entered in um from the order um if that makes sense. So yeah.

Jade Nakabayashi: Are there like revisions that happen post signing? the IO ever that then.

Erin Herting: Yes. Well, well, what will happen is um sometimes it'll be signed and then I think

Jade Nakabayashi: Okay.

Erin Herting: Merced She'll put it on hold and then she'll say pending CSIO. So, there will be times when I definitely meet with her to like confirm because I was helping her a couple months ago, so it might might have changed a little bit.

00:41:32

Erin Herting: Um but but yes, they'll say holding until CSIO and then she'll like really book it when the advertiser has also signed if that makes

Jade Nakabayashi: Oh, that's what CSIO means.

Erin Herting: sense.

Jade Nakabayashi: That the advertiser hasn't count like counter sign to the offer.

Erin Herting: Yes.

Jade Nakabayashi: Okay.

Erin Herting: Or pending CSIO. Like the CSIO is the is the counterigned version. Um, but if we haven't received that and then it's pending. Um, so she will, I believe, put it on hold, which is that little yellow sign in Bob, which it's see in Bob things are in yellow, which means it's hold.

Jade Nakabayashi: Okay.

Erin Herting: So that means that the negotiations happened. Everyone's likes it and it's basically booked except we're missing that count, that final signature from the advertiser. Um, and so that's why we just have them on hold. And then when the counter sign comes in, then we can actually really book and take it off hold. So that's why you'll see little yellow holds in Marley. Um so it's like

00:42:34

Jade Nakabayashi: But it's rare for like anything to change after that point,

Erin Herting: yes.

Jade Nakabayashi: right? Like once something's been put on hold, but they're not necessarily rescheduling or

Erin Herting: Um, yeah. I would say a hold is just the counter signature piece is missing and all everything else is like very we don't we don't we don't put anything on hold that's like oh there's an email chain and somebody likes these dates but they haven't

committed. Like it's it's pretty much the deal is done and we just need a counter signature type of situation. Um because we don't want to we don't want to hold things that aren't aren't basically signed. So we want to like keep because then because then they're moving very

Jade Nakabayashi: You want to be able to sell

Erin Herting: fast too.

Jade Nakabayashi: it.

Erin Herting: So sometimes it'll happen where um an IO will come through from an email chain and by the time the IO actually happened the dates have been booked on a different advertiser and

Jade Nakabayashi: Yeah.

Erin Herting: so

Jade Nakabayashi: How do you avoid like accidentally duplicate booking on the same

00:43:37

Erin Herting: so yeah so that will just happen

Jade Nakabayashi: spot?

Erin Herting: of um Mercedes ad ops they'll just say hey you know in the time that this was booked the dates of the dates aren't available anymore and then she'll request a date shift in the email chain and be like hi so and so can we shift to

Jade Nakabayashi: Oh, so she's just like the owner of that.

Erin Herting: these exactly exactly

Jade Nakabayashi: So there's no way. Okay, I see.

Erin Herting: because before we were all kind of helping pitching in learning how to do it um would just help me learn the process but I think then past that point they everyone just there was an executive decision okay one person is going to own it um because that just helps with tracking.

Jade Nakabayashi: Mhm.

Erin Herting: But again, yeah, definitely I think meeting with Mercedes will be huge because literally in there like,

Jade Nakabayashi: Yeah. Yeah. Yeah.

Erin Herting: you know, oh, request date shift. Okay, these bit dates have since been booked. Um, I don't think it happens a lot, but it but it does happen just with like this, you know, the speed of things and um just trying to get everything done.

00:44:46

Erin Herting: Um, so that will happen and we'll request a date shift. Um but but yeah, but that's why the that's why the holds are in there. Um, and then I know papering is also a super manual process.

Jade Nakabayashi: Yeah.

Erin Herting: So, um, yeah, I think I think adops would like love to automate that capacity.

Jade Nakabayashi: Mhm.

Erin Herting: I don't know like what how how we can do that,

Jade Nakabayashi: Mhm.

Erin Herting: but I know that that's definitely a pain point of like making it less manual. Um, but it's basically just taking a PDF document and entering it into the system is like the is the um,

Jade Nakabayashi: Yeah.

Erin Herting: and sales is really just like confirming the deal, signing it.

Jade Nakabayashi: And then beyond that,

Erin Herting: Um,

Jade Nakabayashi: sorry I know we're at time so if you have to hop please like we can also um

Erin Herting: Oh, no. You're good. You're good.

Jade Nakabayashi: beyond that though is there anywhere where where you jump in like or once the IO is handed off like your that's the end of your journey.

00:45:47

Erin Herting: Um, yes, I would say once the IO is received,

Jade Nakabayashi: Okay.

Erin Herting: I know adops has seen like make sure they're looped in because that's how it becomes papered into the system. So, we have to add them to that chain, make sure they're on it, and then at that point, that becomes it's like passing off to adops because then the client will say, "Hey, um, we need to request, um, addresses to get the host product." And then Mercedes owns product.

Jade Nakabayashi: Right. Right.

Erin Herting: Um, and she's really good at communicating with the host because then it kind of becomes this back and forth between the host and adops and product because normally a brand will want hosts to try the product. Um, so it'll Mercedes will say, "Hey,

Jade Nakabayashi: Yeah.

Erin Herting: here's so and so address. Um, you know, please ship ship product to them." And then it becomes a like kind of a product talk. Um and then later the next step um ad ops requests copy points

Jade Nakabayashi: Mhm. Yeah.

00:46:47

Erin Herting: which is like talking points two weeks in advance of the ad read. Um and then sometimes we book last minute ads. So sometimes that's a little bit there's like an expedited process but that's the norm is ad ops will then say hey so and so brand you have an ad booked requesting copy. So, it's the next steps would be get the product to the host and then request the copy and make sure it's um uploaded for the ho for the

show to see. Um so, and that part I'm not I'm not involved in really. I'm just like but I'm on the email so I'm I know that it's

Jade Nakabayashi: you have visibility. Is it important for you to have visibility into all of that still or are you kind of just

Erin Herting: underway.

Jade Nakabayashi: like

Erin Herting: Um I mean I it's good. I just it's good for me to see because like I I know the next steps in the process. Do I necessarily need that for like my duty for my job?

00:47:41

Erin Herting: No. Um but I think just like as I was starting they're like okay just like beyond these so you

Jade Nakabayashi: Okay.

Erin Herting: know what's going on.

Jade Nakabayashi: Yeah. Yeah. Yeah. That makes sense.

Erin Herting: So exactly.

Jade Nakabayashi: So that you understand the process.

Erin Herting: So it's like okay now we you know I can see I can really see it all the way through. Um. But no, for mine for my duties, I'm definitely like the my job is very much like get the

Jade Nakabayashi: I know.

Erin Herting: sales and like get the you know,

Jade Nakabayashi: Yeah.

Erin Herting: get it going and then um yeah, make sure we're we're we're sending the right shows, the right ops and like getting everything back in a timely manner and everything like that. So, but yeah, but good to but good to know. So, for now, I guess I'll stay on it just to to see. But, but yeah, but I would say that um sales is more of like,

Jade Nakabayashi: Yeah.

Erin Herting: okay, get the brands, you know, bring in new brands and then get them.

00:48:39

Erin Herting: And as we kind of grow and bring on more brands, we try to get the Fortune 500 brands. Um it'll be good just to streamline everything and so everyone can see visibility. Um, I think it also as we grow like having some kind of I think it's CRM like what sales people own what accounts and I don't know if we want that to be in the new system as well. Um, a bit confusing as we're growing of like as a salesperson whose account is this, what is, you know, what brand is under who?

Jade Nakabayashi: Yeah, That's a good call

Erin Herting: It is it is confusing. um like I just kind of keep a dock and like Thomas will sign and then I'll just kind of like make notes

Jade Nakabayashi: out.

Erin Herting: for myself but as we grow um especially now with like our sales team is a lot bigger um last few months just who's

Jade Nakabayashi: Yeah. It's not scalable like

Erin Herting: who's owning what like and like I I know just because I know but

Jade Nakabayashi: Yeah.

00:49:43

Erin Herting: um but it would be great of like oh if we could go somewhere in the new product and say these are um Thomas's accounts, these are Kate's accounts, you know, and just kind of have an internal system. I don't know if that's been brought up yet, but that's something where like that would be super helpful, I think.

Jade Nakabayashi: Cool. That's a good note. Thank

Erin Herting: Yeah. Um yeah, I think it's like a CR. Yeah,

Jade Nakabayashi: you.

Erin Herting: just like and brands. We also sales leads another huge like thing that we that we don't really have a system for. Um, and we're kind of we're just using like our own little trackers. Um, but I think that can be a probably a later a later one. Not as not as urgent.

Jade Nakabayashi: Okay.

Erin Herting: That one's not not as urgent as just like I think building the RFPs and getting the RFPs updated master live and like actively so everyone can edit

Jade Nakabayashi: Yeah.

Erin Herting: them is like is like probably the number one thing from my perspective.

00:50:44

Erin Herting: um is like a live updated master list, RFPs that are kind of in the system and we can build using the system and like an an efficient way to see the fill rates, the avails and all of that. Um. I think those are like the most pressing. So,

Jade Nakabayashi: Sorry, I'm just taking notes.

Erin Herting: no, you're good. No, I This is a lot of information.

Jade Nakabayashi: But no, this was so helpful.

Erin Herting: So,

Jade Nakabayashi: like and like thank you so much for the extra time and thank you like if you think of anything please feel free to like

Erin Herting: yeah.

Jade Nakabayashi: ping me at any point.

Erin Herting: Okay.

Jade Nakabayashi: Um I'm going to I have like a working list of like roles and tasks. I'm going to update that based on this conversation and maybe shoot it over to you if you can like have eyes on it and make sure that I'm getting

Erin Herting: Mhm.

Jade Nakabayashi: it right.

Erin Herting: Okay. Okay. Cool. Yeah.

Jade Nakabayashi: Awesome.

Erin Herting: Yeah. I would say I'm just like helping all sales. I would say it's kind of like a little bit of everything. Um but yeah, but again, if you have any questions or need to do this again,

Jade Nakabayashi: Yeah,

Erin Herting: um just like add time to my calendar.

Jade Nakabayashi: we'll keep talking. Thank you so much.

Erin Herting: Yeah.

Jade Nakabayashi: This is so helpful.

Erin Herting: Yes. Of course.

Jade Nakabayashi: I appreciate you.

Erin Herting: Yeah. So nice to meet you. Okay.

Jade Nakabayashi: You said
