Meeting records 📄 Transcript 🎙 Recording

Summary

Onboarding session reviewed workflows and identified critical system limitations regarding financial reporting and invoicing efficiency.

Current Workflow and Role

The onboarding session established the scope of financial management duties, which have scaled from 30 to 100 shows since early 2024.

System Limitations and Risks

Existing system architectures lack support for complex billing structures and pivot table exports, creating manual data redundancy and potential security risks.

Financial Reporting Pain Points

Manual reporting and invoice aggregation processes remain highly inefficient due to fragmented data sources and the inability to access essential documentation directly.

Next steps

- ☐ [Jesse] Share AirTable: Provide access to the financial AirTable database to facilitate the project onboarding process.

Details

- **Introduction and Role Overview:** Jade Nakabayashi met with Jesse Tracy to understand their role and workflows as part of onboarding for the Salmon team, which aims to improve the existing tool ([00:00:11](#)). Jesse has been with the company since early 2024 and currently manages invoicing, accounting, and monthly financial reporting for approximately 100 shows, noting that this is a significant increase from the 30 shows managed when they started ([00:01:16](#)).
- **Ad Ops Data Access Concerns:** Jesse expressed concerns regarding their current permission levels within the system used by Ad Ops to input orders for embedded revenue and dynamic ad insertions ([00:02:15](#)). Although Jesse does not make unauthorized changes, they noted that the current system architecture allows them to edit these orders, which creates a risk of accidental data modification ([00:03:28](#)).
- **Billing System Limitations:** Jesse explained that the current system struggles with complex billing scenarios, such as when a client requires both agency and direct billing ([00:03:28](#)). An example provided was the client Bubs Naturals, which required the creation of a duplicate "direct" entry to manage different billing destinations, illustrating the system's inability to effectively handle parent-child or dual billing structures ([00:04:46](#)).
- **Invoicing Customization and Aggregation:** Jesse currently generates separate invoices for different revenue types, including embedded revenue, dynamic ad insertions, and custom functions, which is inefficient. The goal is to gain the ability to generate a single, customizable invoice that combines these revenue types while still allowing for client-specific details to ensure payments are processed without delay ([00:07:12](#)).

- Invoice Tracking and Documentation Access:** Jesse manages unpaid invoices and collections through an invoice list and dashboard ([00:09:39](#)). They noted a significant workflow frustration where they must switch between their internal system and bill.com to retrieve and attach PDF invoices when following up on past-due accounts; they would prefer to have these PDFs directly accessible within their internal system ([00:11:19](#)).
- Manual Financial Reporting Process:** The primary pain point for Jesse is the manual generation of financial reports, which currently relies on data provided by an external accounting team. This process involves manually populating data points monthly for each show and uploading the resulting PDF reports into the system for partners, a process Jesse characterized as grueling ([00:02:15](#)) ([00:13:01](#)).
- Use of AirTable for Miscellaneous Revenue:** Jesse utilizes a separate AirTable database to track miscellaneous revenue sources that are not part of core revenue streams ([00:15:14](#)). While there is a desire to replace the external accounting team's manual Excel files with this database, the tool is still in development and currently relies on a parsing system developed by Scott to organize incoming data ([00:16:18](#)) ([00:25:11](#)).
- Reporting and Pivot Table Constraints:** Jesse faces challenges with data analysis because the system does not support the export of pivot tables. Consequently, Jesse must export raw data to Excel to manually create pivot tables for monthly reports, adding unnecessary redundancy to their workflow ([00:18:46](#)) ([00:23:49](#)).
- Broadcast Month Billing Discrepancies:** Jesse noted difficulties regarding "broadcast month" billing cycles, which differ from standard calendar months. Because the current system defaults to calendar months, some invoices are flagged as past due when they are actually compliant with the client's broadcast month schedule, causing unnecessary friction and confusion in the collections process ([00:20:23](#)).
- Summary of Tools in Use:** The current workflow relies on Marley as the source of truth for order and invoice generation, with data pushed to bill.com for final invoicing ([00:07:12](#)) ([00:18:46](#)). Additionally, Jesse uses Excel for reporting, a monetization AirTable for tracking internal metrics, and a secondary finance AirTable for miscellaneous revenue management ([00:15:14](#)) ([00:22:43](#)).

Understanding User Needs w Product (Jesse) - Transcript

00:00:11

Jade Nakabayashi: Hello.

Jesse Tracy: Hi Jade, how are you?

Jade Nakabayashi: Well, how are you? Thank you so much for taking the time to chat with me.

Jesse Tracy: Good.

Jade Nakabayashi: Um, before we get started, do you mind if I record just for my own reference? Thank you. Okay. Um, so hi, I'm Jade. I'm new. Um, I'm just kind of doing the rounds and meeting everyone. This is like the part of my onboarding to really understand how everyone works, how like all of the roles work together. Um, and just sort of getting to know all of you a little bit. Um, I'm also, you know, I think that you've been briefed a little bit on like what I'm doing. um but helping Salmon team out with um the sort of like new iteration of the tool. So, I'm really interested in hearing sort of learning more about like your core workflows and goals and how you use the tool today, what you would like to see tomorrow. Um like what are your core pain points, like what's your wish list, you know, stuff like that.

00:01:16

Jade Nakabayashi: Um but also keeping in mind that I I like don't understand everything yet. So, part of this is just me like understanding what it is you do and what's important to you. Um, but maybe we can just start out by just having you talk a little bit

about your role. Like how long have you been here? What are like the primary goals of your job function? Um, and like what keeps you up at night?

Jesse Tracy: Yeah. So, um I started like two and a half years ago. I think it was the beginning of beginning of 2024.

Jade Nakabayashi: Okay.

Jesse Tracy: So, um I was here when we were sending out invoices with like an Excel file. So, um we've come a long way since then, but still still some stuff that I think could make it a lot better.

Jade Nakabayashi: Wow.

Jesse Tracy: But, um so yeah, I work a lot. So, I do like the invoicing and the some of the accounting and um I

Jade Nakabayashi: Stop it.

Jesse Tracy: do the financial reporting every month for the shows.

00:02:15

Jesse Tracy: The biggest pain point we have right now is the uh doing the reports because we still rely on our external accounting team to send us over the financial information so that we can create the reports and then those are all created manually. Um,

Jade Nakabayashi: Well,

Jesse Tracy: and it was it wasn't that big of a deal when there was like 30 shows,

Jade Nakabayashi: that sounds excruciating.

Jesse Tracy: but we have like a hundred now. So, it's like So,

Jade Nakabayashi: Yeah.

Jesse Tracy: I think like that if I can make one thing improve it would that like that's the thing that keeps me up at night. Um, so yeah, I work with ad ops too like whenever They're the ones who input all the orders for the um embedded revenue advertisements and like the dynamic ad insertions as well. So at the beginning of the month, I send out everything that's been put in the orders for the previous month. So like the beginning of July, I send out the June invoices to everyone. Um so then yeah.

Jade Nakabayashi: Can you maybe like can you show me like how you do stuff?

00:03:28

Jade Nakabayashi: Can you like screen share so I

Jesse Tracy: Absolutely. So, yeah,

Jade Nakabayashi: can

Jesse Tracy: the um they put their orders in here and I have access to it, which is great. Um I don't think I should have access like I could edit this right now. I don't think I should have that access. Um I don't I don't mess with anything,

Jade Nakabayashi: wow of

Jesse Tracy: but but

Jade Nakabayashi: course but like someone could just be clicking around and not realize

Jesse Tracy: um right Yeah. So,

Jade Nakabayashi: together.

Jesse Tracy: um yeah, they they're the ones who input all the orders and stuff and then I'm kind of dealing with the invoicing part. So, if I get um requests from like when we send out the invoice and the person responds back and says like, "Hey, can you adjust this?" Like, that's where I'll communicate with them. Um so, there's we have this org to invoice. We select it's either the advertiser or the agency. We do have some issues sometimes where there's uh like the system isn't built like it's it's kind of a onetoone thing where if we had so for example let me just try to get my words here um we have a client called Bubs Naturals and we have an agency that wants us to bill directly but we're also billing Bubs Naturals.

00:04:46

Jade Nakabayashi: Mhm.

Jesse Tracy: directly. So this is tied to we just have a tab that um houses all the advertisers and all the agencies.

Jade Nakabayashi: This

Jesse Tracy: So um this is the same brand but we just had to add like bubs nav pillars direct so that we would be able to make sure that the invoices are getting sent to the right place. um because the agency that we use wants us to build them directly and then we have themselves that want us to build them directly. So it's like the system isn't designed to um handle that very well. I don't know that probably doesn't make any sense but um yeah

Jade Nakabayashi: So this is populated when you come here and you're just effectively saying like who this should be built to but because there's like it's like are you saying it's a parent child relationship and they want you to build both and it doesn't facilitate that or

Jesse Tracy: It's like we can get these borders Four. Bubs and this could this could be a problem with other advertisers too.

00:06:04

Jesse Tracy: It's just this is the only one that we have the problem with right now.

Jade Nakabayashi: H.

Jesse Tracy: So there's an order from Bubs Naturals that comes from Podcale and Podscale wants us to send the invoice the bill to information.

Jade Nakabayashi: Okay.

Jesse Tracy: They want us to use like Bubs Naturals actual bill to information and then we have Bubs Naturals that doesn't come through Bodil. comes like directly from them. They're reaching out to us and putting you an order. So, it's like on both of these occasions, the org to invoice should be the advertiser because if you selected the agency as pod scale, it would send a pod skills information,

Jade Nakabayashi: Right.

Jesse Tracy: but we needed to go to to Bob's. So,

Jade Nakabayashi: Go

Jesse Tracy: um we had to just create like Bob's Naturals direct. Yeah.

Jade Nakabayashi: Yeah.

Jesse Tracy: So, stuff like that. Um, but yeah, I whenever we send stuff out and there's any issues with it or get requests to change um the bill to information, I come in here and I change it here.

00:07:12

Jesse Tracy: And then I also go back and I go into bill.com too because that's the system that we're input. Like Marley is the input system and then it goes to bill. It pushes to bill.com. So I just try to go and make sure that everything matches and using

Jade Nakabayashi: this party.

Jesse Tracy: Yeah. and using Marley as a source of truth. Um so yeah and then at the beginning of the month I go to generate invoices. So this generate invoices this is for baked in or embedded revenue. Um, we have a couple of different inventory items. So, we kind of just built them out so that we could keep

Jade Nakabayashi: Mhm.

Jesse Tracy: them separate, but all still in Marley. We built them out all separately. So, I come in here and I generate the embedded revenue ad or invoices and then DAI and then like these other things. So, um I think ideally we would want to be able to have the ability to invoice anything that's invoicable all on one invoice, but also have the ability to customize that to each agency or advertiser.

00:08:47

Jesse Tracy: Um to

Jade Nakabayashi: Are these all separate now? So, because they're like custom like custom functions, but like it's like it shouldn't be separated,

Jesse Tracy: Yeah,

Jade Nakabayashi: right? They should just be like,

Jesse Tracy: that We should be able to send like one invoice that

Jade Nakabayashi: "You should be able to say it's the type and it generates one thing.

Jesse Tracy: has embedded DAI,

Jade Nakabayashi: Yeah.

Jesse Tracy: social, custom,

Jade Nakabayashi: So,

Jesse Tracy: all this stuff like in one.

Jade Nakabayashi: you're send you're sending separate invoices for each of these types.

Jesse Tracy: Yes.

Jade Nakabayashi: Oh, wow.

Jesse Tracy: Which um our embedded revenue is a majority of what we have and then there's uh

Jade Nakabayashi: Okay.

Jesse Tracy: DAI is the next biggest but then these other ones are way smaller volume. So, it's not like it's a big headache,

Jade Nakabayashi: Yeah. Okay.

Jesse Tracy: but um I think the key is the the ability to customize because some clients are like, "What is this for? We want this to be separated out." And some of them and they'll use that as a reason to not pay.

00:09:39

Jesse Tracy: They'll be like, "We can't match this to anything." And so it's like we want the ability to whatever they're asking us for give to them so that they don't have a reason to not pay us. But yeah, so then like all of these things tie to a dashboard. So we

can kind of see like okay well what what portion of our revenue is um embedded and what's social and what's uh DAI and stuff like these different categories. So just making sure that whatever process we do that would invoice them all together in one spot wouldn't mix all of this together. Like we still want to be able to look at this and parse it out. Yeah.

Jade Nakabayashi: Paria.

Jesse Tracy: Um, and then I work a lot from this invoice list where I can see all of the um, unpaid past due invoices and stuff and reaching out to clients, being able to send past due reminders. Um, so I need a field like this where I can see like the invoice number, the amount, how overdue is it, who it's for, the agency, and all of that stuff.

00:11:19

Jesse Tracy: And then uh

Jade Nakabayashi: So are you you're managing this list? Yeah. Yeah.

Jesse Tracy: And then we have this invoice and received tab where I can look up a show and be able to see like, okay, we've sent this invoice. It hasn't been paid yet. Um, or we sent this invoice and it has been paid and it shows us the details of when it was paid. Um yeah,

Jade Nakabayashi: Are you like chasing them down to get them to pay?

Jesse Tracy: Yeah, it's not um a lot of it is agencies, so I can reach out to one agency like I can send one email for

Jade Nakabayashi: Yeah.

Jesse Tracy: like 15 different invoices.

Jade Nakabayashi: All

Jesse Tracy: Um,

Jade Nakabayashi: right.

Jesse Tracy: it would be nice to have the PDFs readily accessible because I usually just have to go like we used prior to being in bill.com they were housed like in this little invoice tab. Um, hold see like here it existed in here. Um, but since we've been in bill.com, it's like they exist in bill.com, but it would be nice to have it here instead

because this is what I'm looking at when I'm pulling the invoices that need to be sent past reminders.

00:13:01

Jade Nakabayashi: Yeah.

Jesse Tracy: So, I kind of just have to like go look up the email that I sent and find the PDF

Jade Nakabayashi: Yeah.

Jesse Tracy: and attach it and then go from there.

Jade Nakabayashi: You just want the context of the document that you actually sent over and like the space that you're doing the work, right?

Jesse Tracy: because it it does exist in bill.com, but if I went to bill.com and did all that,

Jade Nakabayashi: That's annoying.

Jesse Tracy: I would think. Yeah. The other big portion, the podcast reports that I was telling you about.

Jade Nakabayashi: Yeah,

Jesse Tracy: So, that I'm doing completely manually. And then uh I after I do all that I go and I upload them here which I think this would go away once we were able to generate them from within our own system. But yeah, like this is another task that I have is like going back through your kind of showing what amounts got paid out and then uploading a PDF version of the report and then publishing it so that our partners can see because they get a I think they get a notification whenever um I publish something in here.

00:14:13

Jade Nakabayashi: So, you're doing this monthly for all of the shows and then you're just like going across the system and picking all of these

Jesse Tracy: Yes.

Jade Nakabayashi: data points and populating them in manually. That sucks. That's crazy. It's like this is so obviously something that should be

Jesse Tracy: Right.

Jade Nakabayashi: automated.

Jesse Tracy: But it's like we have we have revenue sources coming from so many different things and that's the issue is like

Jade Nakabayashi: Yeah.

Jesse Tracy: if we just had embedded revenue and DAI and like our own stuff I you know this would have been automated a long time ago but we have just different sources and it's a matter of how to import their data and make it make sense so that it generates the right thing. Like we have a whole other

Jade Nakabayashi: Yeah, you said that. Sorry. Good.

Jesse Tracy: um this a whole other financial air table database that has like these other miscellaneous uh income sources. So,

Jade Nakabayashi: Can you share this with me? Is that allowed?

00:15:14

Jesse Tracy: um I'm not

Jade Nakabayashi: I can also just screenshot it if it's not. But yeah,

Jesse Tracy: sure.

Jade Nakabayashi: you mentioned that like there's external like you said external financial team. So you're getting the data from other places. Is there anywhere else besides this like external finance data error table that you're pulling in revenue streams from to populate that other

Jesse Tracy: Like this is what we've built out in here so far.

Jade Nakabayashi: space?

Jesse Tracy: There are more that haven't been built out yet, but everything that we get is supposed to be going to like our uh external accounting team ha should have that information and that's how they generate the financial statements that they send over to me so that I can create the reports.

Jade Nakabayashi: Is that like is that just like a document that they're emailing you or is it

Jesse Tracy: Yeah, they send me a bunch of they send me an individual Excel file for each of the

Jade Nakabayashi: Yeah.

Jesse Tracy: shows at the Yeah, I got them all yesterday and got all the reports done and sent over today.

00:16:18

Jade Nakabayashi: So what is the role of this air table

Jesse Tracy: But um I think we're just

Jade Nakabayashi: then?

Jesse Tracy: it's I I don't know. It's like it has all of the stuff that's not our core revenue streams just so that we can like keep track of it somewhere. Um, we haven't, like I said, it's still being built out, but like for cloud roll, they send us their like the report and then we upload it to a different system and then it kind of parses out the data and spits it out so that it's here in this air table.

Jade Nakabayashi: But this doesn't at all address like the you said they're sending you the individual show reports. This doesn't address that at all.

Jesse Tracy: Yeah.

Jade Nakabayashi: This is something totally separate, different revenue streams.

Jesse Tracy: Well, it's like ideally we would be able to use this instead of our external accounting team to get all this information, but it's not built out yet.

Jade Nakabayashi: Yeah.

Jesse Tracy: It's like it's still in the process of being built. So, um, but like,

00:17:29

Jade Nakabayashi: Okay.

Jesse Tracy: um, and I think Scott built it out separately so that I don't he had some reason for like the to keep it separate from Marley or like the AP. I don't know. But I think Yeah. I don't know.

Jade Nakabayashi: But ideally, somebody would just be like retrieving all of these PDFs and dump something them in a system and then it would autopop populate and you would be able to like have eyes on it and make sure it was right and then like just send it out, right?

Jesse Tracy: which a lot more like ouris function. Like someone just puts in all the stuff and then I look at it, make sure everything's right, and then send it instead of handc crunching

Jade Nakabayashi: Yeah.

Jesse Tracy: Excel documents.

Jade Nakabayashi: Yeah. This is wild. Thank you for walking me through

Jesse Tracy: Yeah.

Jade Nakabayashi: this.

Jesse Tracy: And then there's a couple I do some reporting too like I have a data sheet that I update and it's based on uh reports within Marle.

00:18:46

Jesse Tracy: So, one of those if I was trying to like I don't know for whatever reason, you know, you can't export a pivot table in Air Table. So, I have to just take the raw data and then push it to Excel and then uh pivot it from there and then use that information to update my reports that I have. Um so it's like we have to use this because we can't

export um this itself like this is the information that we want but we don't have the ability to just send this out.

Jade Nakabayashi: Yeah.

Jesse Tracy: Yeah, the invoicing and the reporting, those are like my main big tasks and stuff. Um,

Jade Nakabayashi: And then does the invoicing like go out through the system or are you like gathering the information from the system and then emailing it or something?

Jesse Tracy: it gets pushed from our system into bill.com and then the invoices get sent from

Jade Nakabayashi: Go. Okay.

Jesse Tracy: bill.com.

Jade Nakabayashi: Is there anything that you feel is like unique or like weird from an industry standpoint about like how we're billing?

00:20:23

Jesse Tracy: I don't think so. I just think like the like I mentioned the flexibility to customize how we're billing for each of our customers I think would be a big deal because some of our clients pay based on broadcast month which is different than the calendar month. Um, so we kind of at the beginning when we were building this out,

Jade Nakabayashi: Okay.

Jesse Tracy: we're like, "Okay, we're going to make our invoices based on the calendar month." But there are some clients that decide to pay out based on um broadcast month which is different. So there we have this client that we get partial payments because they're like oh no it's like that'll be part of the next bill run. So I in my system it's saying that it's past due, but based on how they pay out, it's not technically, you know. So it's like I'm kind of chasing people down for money um that isn't technically due yet if they're going by like their own standards,

Jade Nakabayashi: What is

Jesse Tracy: which I guess I don't let me.

00:21:29

Jade Nakabayashi: month?

Jesse Tracy: It's just like instead of the 52 weeks in a year or something, it's I'm not the person to answer this question. I'm asking

Jade Nakabayashi: It's okay if you don't know.

Jesse Tracy: I

Jade Nakabayashi: I I just absolutely don't know.

Jesse Tracy: It's just like a different calendar basically. It's like the weeks the beginning of the week is not your standard 52- week calendar. It's like a like the

Jade Nakabayashi: It's like the days on which you would broadcast,

Jesse Tracy: the right it's like the result the result is

Jade Nakabayashi: right? Yeah.

Jesse Tracy: that if something ran at the very end of March and it's on the March invoice they'll be like well since it was at the very end it's part of April so we'll pay that out when we pay out April's invoice.

Jade Nakabayashi: Okay.

Jesse Tracy: And it's not like it's a big deal cuz like we still get paid. Um but just the it's not accurate in our system like if our partners can see that an invoice is passed if showing is passed due because like we need it to say passed due so that it doesn't slip through the cracks.

00:22:43

Jesse Tracy: Um so they're like well why the hell haven't you collected this? and like, well, it's not technically due yet, but it's just showing us past,

Jade Nakabayashi: Yeah,

Jesse Tracy: you know,

Jade Nakabayashi: that sounds really annoying for you to be like,

Jesse Tracy: it's not

Jade Nakabayashi: "Oh, I just have to remember that they're billing on a different schedule." Like,

Jesse Tracy: too

Jade Nakabayashi: um, are there any other tools that you use? was like you talked about that like finance specific error table that should be populating from the PDFs but you're really just using the PDF reports that external team is sending you. Is there anything else that like you're using in your day-to-day workflows to do your

Jesse Tracy: Um,

Jade Nakabayashi: job?

Jesse Tracy: so yeah, Phil, like I mentioned, the system that we send our invoices from, so I'm in there a lot. Um, and then our monetization sheet where we're, this is where I'm going and like pulling the data that's in Marley and I'm uploading it here. Um, so that's another thing. Um,

Jade Nakabayashi: And this is generate reports with

00:23:49

Jesse Tracy: and then no,

Jade Nakabayashi: it.

Jesse Tracy: this is just for like our sales team and our finance team to look at and be like, okay, Where are we at? Where how are we tracking with stuff? So, it's like an internal use.

Jade Nakabayashi: It's just other metrics that you're talking

Jesse Tracy: Yeah.

Jade Nakabayashi: against.

Jesse Tracy: feel like there's probably some way to make it, you know, like where where we can't

Jade Nakabayashi: Yeah.

Jesse Tracy: um the dashboard where we can't just export it the way that it is and having to do that instead, you know?

Jade Nakabayashi: Oh, that's where you were saying like you can't make it a pivot chart. So, you have to

Jesse Tracy: Yeah. So, like I go in here and I update

Jade Nakabayashi: Yeah.

Jesse Tracy: embedded revenue tracking and this data all exists right here like January through December and that's what I need to do here but I have that's where I have to go and just send out the like export the raw data turn it into a pivot table and and upload it or paste it in here, you know.

00:25:11

Jade Nakabayashi: Yeah,

Jesse Tracy: So, yeah.

Jade Nakabayashi: just like

Jesse Tracy: Um,

Jade Nakabayashi: redundancy.

Jesse Tracy: and then I guess the this I don't even know what this is. This is what Scott developed for um like anything that gets input here talks to this other the finance payout or the finance air table. So it's like separate but that is something that I I reference

Jade Nakabayashi: They trying to like build a tool that replaces the financier table. Is that what this

Jesse Tracy: well this is like the how the this is where the inputs come from that

Jade Nakabayashi: is?

Jesse Tracy: get that result in what's in the finance table.

Jade Nakabayashi: Okay. How

Jesse Tracy: Scott has to do a bunch of the data that we get too sometimes is really weird.

Jade Nakabayashi: did

Jesse Tracy: Like the reports that we get from um those miscellaneous revenue sources that I mentioned would be insane and like really hard to

Jade Nakabayashi: Yeah.

Jesse Tracy: like our our external accounting team. They take that data and they crunch it and pivot it and figure out how much we're supposed to be allocating to each show.

00:26:44

Jesse Tracy: So this um Scott built this out so that we could just upload the files and it would do that automatically for us and then the result would

Jade Nakabayashi: Mhm.

Jesse Tracy: be like end up in here.

Jade Nakabayashi: What's the difference though? Like is there a difference?

Jesse Tracy: Not really. I mean, this is just a lot easier to navigate than this because it's like if I wanted

Jade Nakabayashi: Okay.

Jesse Tracy: to look up a specific show, you know, I have to control F. Whereas if I'm over here, I can kind of look at it.

Jade Nakabayashi: I see that's literally just that's doing the work of parsing.

Jesse Tracy: It's just a lot cleaner.

Jade Nakabayashi: that specific task. And then this is like I see.

Jesse Tracy: I think there's I think there's some other stuff in here, but I just deal with like the finance stuff, like the bottom red circle reports,

Jade Nakabayashi: Okay.

Jesse Tracy: but sales uses it too. I don't really know what for. Um, so yeah, I hope that helps. Does that Do you have any questions for me?

00:27:49

Jesse Tracy: Anything else or

Jade Nakabayashi: Yeah, that's super helpful. Thank you so much for your time. I guess like is just there anything else that you feel like we didn't talk about that you wanted

Jesse Tracy: Um,

Jade Nakabayashi: to.

Jesse Tracy: not really. I'm sure. I mean, there's obviously stuff that I haven't thought of, but those are like the big those are my big tasks,

Jade Nakabayashi: Yeah.

Jesse Tracy: you know? It's like if we could get those ironed out, that'd be awesome.

Jade Nakabayashi: Sweet. Well, yeah. Thank you so much for your time. If you think of anything, feel free to ping me and I'm sure that we'll chat a lot more all the time in the future. So, thank you.

Jesse Tracy: Are you are you like part of the company yet or like what happened?

Jade Nakabayashi: I'm contract.

Jesse Tracy: Are you okay?

Jade Nakabayashi: Yeah.

Jesse Tracy: All right. Yeah, I'll let you know. But thank you for having this meeting.

Jade Nakabayashi: Thank you.

Jesse Tracy: Nice to meet you.

Jade Nakabayashi: You too. Bye.
