Meeting records 📄 Transcript 🎙 Recording

Summary

Sales and Ad Ops workflows were aligned through defining functional boundaries and optimizing tool utilization strategies.

Defining Operational Workflows

Sales and Ad Ops clarified departmental boundaries regarding request vetting, proposal management, and post-sales reporting responsibilities. Teams established clear ownership of the proposal process and scheduling procedures.

Tool Optimization Strategy

Participants identified key feature improvements for the Vault tool to mitigate manual errors and aggregate copy status data. This decision prioritizes efficient communication through standardized filtering and automated reporting views.

Decisions

Aligned

- **Bob interface strategy established** The Bob interface will be developed as a centralized one-stop-shop, incorporating required filtering metrics for AdOps to function independently.
- **AdOps tool interface ownership confirmed** AdOps operations are scoped to utilize the top-left view and the consolidated Bob tool, while Sales retains access to the top-right and bottom-left views.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [Brett] List Filters: Compile the list of filter requirements for the Bob interface and send them to Jade via Slack.
- ☐ [Jade] Document Requirements: Synthesize the meeting discussion into a clear set of functional requirements for the Bob application to confirm understanding.
- ☐ [Jade] Consult Sales: Speak with Thomas and Kel regarding the top right and bottom left views to evaluate their necessity or potential for consolidation.
- ☐ [Jade] Schedule Weekly Meeting: Book a recurring weekly check-in session with Brett to continue planning the Bob integration.

Details

- **Meeting Objective and Context:** Brett Connaughton and Jade Nakabayashi initiate a meeting to clarify the operational workflow between Sales and Ad Ops. Jade Nakabayashi intends to map the overarching journey of sales and ad operations to define key materials, deliverables, and the functional boundaries between the two departments ([00:00:50](#)).
- **Sales and Ad Ops Functional Boundaries:** Brett Connaughton clarifies that the sales process initiates the workflow, including RFP intake, rate card filtering, and creating the RFP itself, which involves Aaron Hurting. Ad Ops is responsible for vetting requests once sales puts together the initial list of shows from the rate card ([00:01:42](#)).
- **RFP and Insertion Order Distinctions:** The participants discuss that an RFP serves as a distilled version of the master rate card, while an Insertion Order (IO) represents the specific deal accepted by an agency. Sales owns the RFP process, which requires adapting to different agency templates ([00:04:37](#)).
- **Ad Ops Post-Sales Responsibilities:** Ad Ops owns scheduling and reporting, with Haley Chapman managing the proactive reporting schedule for clients. Sales does not typically require deep visibility into these specific delivery and performance tracking areas unless specific issues arise ([00:07:32](#)).
- **Vault and "Bob" Tool Functionality:** Brett Connaughton highlights the significant time-saving potential of the "Bob" interface in Vault, specifically the ability to drag and drop to shift ad flights. This feature mitigates manual errors associated with re-entering data for scripts, revenue, and impressions when schedules change ([00:09:39](#)).
- **Podcast Calendar and Fill Rate Definitions:** The team defines the "fill rate" as the percentage of ad spots filled versus available spots within an episode. They confirm that the podcast calendar operates on a Monday-through-Sunday schedule, which is how week-specific ad placements are referenced ([00:13:06](#)).
- **Ad Copy Trafficking Process:** Kyle Larson manages the ad copy process, performing a "copy audit" three weeks in advance to ensure all necessary scripts are uploaded. If scripts are missing, they mark the status as needing a request and follow up with advertisers ([00:20:05](#)).

- **Requirements for Aggregate Copy Status Views:** Brett Connaughton emphasizes that for "Bob" to be a successful one-stop shop, the team needs an aggregate view that filters by advertiser, week, and copy status (e.g., "Ready to Record," "Need to Request Copy"). This allows the team to send efficient, grouped communications rather than contacting agencies for every individual show ([00:22:11](#)) ([00:25:32](#)).
- **Potential Automation for Copy Requests:** There is a desire for an automated feature where the system could generate mail-merge emails to advertisers for missing copy based on specific filter criteria, which could save several hours of manual work per week ([00:23:09](#)).
- **Sales-Specific Tool Views:** Brett Connaughton identifies that certain views in the current setup, specifically the top right and bottom left, are utilized primarily by sales team members Thomas and Kel. Ad Ops does not require these views, so Jade Nakabayashi will coordinate with sales to understand those specific requirements ([00:29:43](#)).
- **Future Collaboration and Next Steps:** Brett Connaughton and Jade Nakabayashi agree to establish weekly meetings. As a next step, Brett Connaughton will draft and share a list of necessary filters for the "Bob" tool via Slack to ensure the platform meets the functional needs of the Ad Ops team ([00:30:34](#)).

Understanding User Needs w Product Pt. 2 (Brett) - Transcript

00:00:01

Jade Nakabayashi: Hello.

Brett Connaughton: What's up, friend?

Jade Nakabayashi: How are you?

Brett Connaughton: Making it through the week. We're down.

Jade Nakabayashi: Yeah,

Brett Connaughton: We're down two people on a fourperson team.

Jade Nakabayashi: that's a rough. I'm sorry.

Brett Connaughton: It happens. It happens.

Jade Nakabayashi: Do you have any any fun and relaxing plans for the weekend?

Brett Connaughton: Um, there's a wine festival down at the waterfront where we live tomorrow. So, we'll probably go pop down there and walk around a bit, at least as long as the the baby is fine before he gets grumpy.

Jade Nakabayashi: That sounds

Brett Connaughton: That'll be fun. That'll be fun.

Jade Nakabayashi: lovely.

Brett Connaughton: It'll be nice to get out and see some friends for a change. We're usually pretty tucked in here because our kid's only four month old, so he's not Yeah.

Jade Nakabayashi: Wow. Congratulations.

Brett Connaughton: Thank you.

Jade Nakabayashi: You must be

Brett Connaughton: Thank you.

Jade Nakabayashi: tired.

Brett Connaughton: funnily enough, we sleep usually pretty well. It's during the day when it gets a little bit tricky.

00:00:50

Jade Nakabayashi: Yeah.

Brett Connaughton: He's uh he he he loves to be held, so typing emails with one hand is tricky.

Jade Nakabayashi: Yeah, working from home definitely a blessing and a curse.

Brett Connaughton: Yeah. Yeah. Yeah. Definitely.

Jade Nakabayashi: Um,

Brett Connaughton: And

Jade Nakabayashi: I'm not sure if you had some anything specific that you wanted to chat about. I have some specific questions for you if that's okay.

Brett Connaughton: run with the specifics and then I'll bounce off you.

Jade Nakabayashi: Um, is it if I record just to have this to refer back to? Amazing.

Brett Connaughton: 100%

Jade Nakabayashi: Thank you so much. All right. So, I'm gonna share my screen.

Brett Connaughton: 100%.

Jade Nakabayashi: entire screen, you know. So, I was chatting with Sam and we're trying to gain a little bit of clarity on a couple of things. So, I'm working on pulling together just an overarching journey, right, of how sales and adops work.

Brett Connaughton: Uh Mhm.

Jade Nakabayashi: And then I'm also working on defining sort of the key materials and deliverables.

00:01:42

Brett Connaughton: Cool.

Jade Nakabayashi: I think we have some questions around like where the line is drawn between sales and adops like what functions are sales specific and adop specific. Just thinking about you're making me so nervous with this

Brett Connaughton: No, no, that is an ongoing qu like we we've had I think we keep me,

Jade Nakabayashi: laughter.

Brett Connaughton: Thomas, and Kate keep saying we're going to have a meeting to discuss this and then five other things happen in the meantime. Um this is a very pertinent question. It's just a matter of how we want to look at it. I can answer most of what you have. Um, and then if something has to change, we'll we'll tell you. But yeah, that's uh go ahead and ask. I will answer probably the best we

Jade Nakabayashi: Yeah. So,

Brett Connaughton: can.

Jade Nakabayashi: I mean the flow that I have mapped out here starts at the RFP intake. Um, and then rate card filtering,

Brett Connaughton: Mhm.

Jade Nakabayashi: invetting, submitting, get feedback, sort of that back and forth.

00:02:36

Jade Nakabayashi: I know that a lot more happens here.

Brett Connaughton: Yep.

Jade Nakabayashi: And then once that final once that's finalized ad plan and scheduling papering the IO again sort of iterating on revisions delivery and reporting and

Brett Connaughton: Yep. Yep. Mhm.

Jade Nakabayashi: then so on but in my mind and like again not knowing much

Brett Connaughton: Yep.

Jade Nakabayashi: but sales happens before this,

Brett Connaughton: Mhm.

Jade Nakabayashi: right? Oh,

Brett Connaughton: Sorry, she does not get a lot of attention nowadays because of the baby. So if I'm sitting alone,

Jade Nakabayashi: looks like you can find

Brett Connaughton: she runs up and says hi. Yep. Okay. So, um,

Jade Nakabayashi: it.

Brett Connaughton: yes, sales will happen before this. The only thing that'll happen that Adops will interact with in these first few cells or these first few images is going to be vetting. Adops handles the vetting requests.

Jade Nakabayashi: Okay, so sales is doing all of this. back and

Brett Connaughton: sales will do the RFP rate card pulling.

00:03:30

Brett Connaughton: They'll put together the entire actual like RFP for the client. That's going to be Aaron hurting and sales.

Jade Nakabayashi: forth.

Brett Connaughton: Um to start that process, what we do is they'll say an a client will come to us and say, "Hey, Forkful wants to advertise on shows that have this type of background." um sales will put together a list of those shows uh from the rate card.

Jade Nakabayashi: Mhm.

Brett Connaughton: They will send it to ad ops to vet and we will send out vetting requests to find who says yes and who says no and why sales will then go into the

Jade Nakabayashi: Okay.

Brett Connaughton: advertisers uh field the advertisers page in Marley or in Bolt and see who said yes. And we also have a column for why they said yes, which we always say is very important. Um, and they will extract that data, put it into an RFP, and send it

Jade Nakabayashi: Okay.

Brett Connaughton: out.

Jade Nakabayashi: So, the IO

Brett Connaughton: Mhm. So,

Jade Nakabayashi: is this actually the RFP because No.

00:04:37

Brett Connaughton: so no. Well,

Jade Nakabayashi: Right.

Brett Connaughton: yes and no.

Jade Nakabayashi: So,

Brett Connaughton: Um,

Jade Nakabayashi: when you say that they send the RFP like I thought the RFP was

Brett Connaughton: our RFP is going to look just like the rate card.

Jade Nakabayashi: just Okay.

Brett Connaughton: RFP is going to be a chopped down version of the rate card.

That's going to be where we give that's where Thomas and them give an example of like what the rates are, um, what the product is, what the show is, the show code, all that fun stuff. The IO is the actual insertion order when an agency accepts a deal and gives it to us. So, the the rate card may have 10 shows. the IO may only have three of those 10 that the the client accepted.

Jade Nakabayashi: Right. Right. Right.

Brett Connaughton: So, it's a

Jade Nakabayashi: But is this this is this is like the full list of shows.

Brett Connaughton: precursor.

Jade Nakabayashi: That's the comprehensive rate card. And then they duplicate this, right?

00:05:25

Jade Nakabayashi: And then they insert it into like this other version that's specific of the list of shows

Brett Connaughton: Uh-huh.

Jade Nakabayashi: that pertains to the original RFP. But this is called an RFP, too.

Brett Connaughton: Can you zoom in on order record a bit more for me?

Jade Nakabayashi: Sorry.

Brett Connaughton: um as agency sends a request for proposal to Brent. Yes. So what you're going to see so we have the rate. So yes I guess in this case for order record I I haven't heard it called that before. I would just call it an an RFP,

Jade Nakabayashi: Okay,

Brett Connaughton: but um but yeah,

Jade Nakabayashi: it's all the things then.

Brett Connaughton: I would say so we we the RF And any RFP is going to be a distilled or uh a specialized version of the master sheet. So just think of instead of the master sheet having everything, we just pull what fits and drop it into this.

Jade Nakabayashi: Yeah.

Brett Connaughton: And that's what the starting version that's that's a basic RFP. Um so each this is something sales will tell you.

00:06:15

Jade Nakabayashi: Okay.

Brett Connaughton: Aaron,

Jade Nakabayashi: Right.

Brett Connaughton: yeah, sales sales owns that process. Um Aaron hurting does a lot of this.

Jade Nakabayashi: Sure.

Brett Connaughton: um for sales. She's like half ad ops, half sales assistant. Um she's a very good person to talk to about this. Each agency has a different template, but it all has the same information.

Jade Nakabayashi: Yeah.

Brett Connaughton: It's just how they want it put together. Um so very rarely do we just get to send our own easy one. Usually we we take this and then put it into whatever templates they have by agency. and Aaron can explain, oh, Oxford has this, RSU has this, WPP has this. I take this and this. She's going to be the person you want to talk to about that because she does that probably 95% of the time.

Jade Nakabayashi: Okay.

Brett Connaughton: Yeah.

Jade Nakabayashi: And then like downstream from this process,

Brett Connaughton: Yep.

Jade Nakabayashi: I would assume that like even though sales isn't owning like adops is owning scheduling, right?

00:07:32

Jade Nakabayashi: Yeah. So is there anything downstream that like sales will want to see even though

Brett Connaughton: Yep.

Jade Nakabayashi: Adops owns it?

Brett Connaughton: No, not that I can think of. Um,

Jade Nakabayashi: Okay.

Brett Connaughton: usually the way it goes from there is, uh, sales will just ask or or an agency will ask ad ops for performance reporting. Um, which we touched on briefly on Monday. Um, I would say sales doesn't really need visibility into a lot of this.

Jade Nakabayashi: Mhm.

Brett Connaughton: They'll we keep Marley updated and they'll go in and check as needed.

Jade Nakabayashi: Okay. So, but it's just really the reporting that sales may want visibility

Brett Connaughton: Uh yeah, but usually that's just the way a lot of a brand English is hard.

Jade Nakabayashi: into

Brett Connaughton: The way a lot of our brands work is we they just they give us we do proactive reporting in terms of we have set times and set days for each agency and each client. Um Haley Chapman handles that primarily. cat, if you close this screen, I will adopt you to someone else.

00:08:41

Brett Connaughton: Um, basically it will go to Haley has a schedule every day of like which advertiser wants their reporting done. Um,

Jade Nakabayashi: Mhm.

Brett Connaughton: so she uploads that and then she'll do all that reporting proactively and then if we have like a one-off request, it'll be sent to sales. and to my team adops and adops will just jump on it. So I would say sales having visibility into it is fine but I don't think there's really anything sales going to want to go after in terms of delivery reporting or performance tracking. That's usually something we hear back from the client on. It's not something that we go to them with unless Thomas is really trying to get a show sold that isn't selling. Um,

Jade Nakabayashi: Okay,

Brett Connaughton: and that he'll kind of show how that works, but

Jade Nakabayashi: that might be a good pivot into like this space because we were trying to understand what

Brett Connaughton: Uhhuh.

Jade Nakabayashi: the difference is between these views, what they're used for, if we really need to replicate all of them.

00:09:39

Brett Connaughton: Mhm.

Jade Nakabayashi: Um, and then we have I'm sure you've seen this, but like this really amazing view in vault that effectively is moving Bob into here.

Brett Connaughton: Yep.

Jade Nakabayashi: Um, but I think we had the question of like

Brett Connaughton: I have I have a dream of that Bob page.

Jade Nakabayashi: can

Brett Connaughton: If I wanted to move alloy from 713 to 76, I could click that tile card and just drag

Jade Nakabayashi: Yeah,

Brett Connaughton: it.

Jade Nakabayashi: that works.

Brett Connaughton: I don't think you realize how much of a time save that is for us. It's been the number one most requested feature from my team um for a

Jade Nakabayashi: Yeah.

Brett Connaughton: reason because right now we have to go in and it creates mistakes. It creates a million instances where mistakes can happen. Being able to just drag and drop.

Jade Nakabayashi: Mhm.

Brett Connaughton: Vault could do nothing else and just do that and adops would be happy.

Jade Nakabayashi: That's amazing. I love that. Yeah, it's like so it's so like obviously I didn't know with this,

00:10:41

Brett Connaughton: Yeah.

Jade Nakabayashi: but like it's so fulfilling to just hear that it's making a real impact in people's lives and making their lives like the whole thing,

Brett Connaughton: that that that that cuts out so much time,

Jade Nakabayashi: you

Brett Connaughton: so many issues because when we have a brand who's like we have to have two week I'll give you a

Jade Nakabayashi: know?

Brett Connaughton: perfect use case for this. Um certain brands, so take Quint for example, has to have three-week minimum separation between their ad reads. It's just what the client dictates to the agency. Every single podcast follows it. So, if you move one flight on a 35 flight order,

Jade Nakabayashi: Yeah,

Brett Connaughton: you have to move the rest of them. And to do that,

Jade Nakabayashi: that's

Brett Connaughton: you have to go in, delete the flight,

Jade Nakabayashi: purple.

Brett Connaughton: read the flight into the new week, make sure it pulls over all of the scripting, all of the impressions, all of the revenue. And you have to do that in mass every single time.

00:11:31

Brett Connaughton: And after about 10 or 15 minutes in the ad plan, it starts to lag like crazy.

Jade Nakabayashi: Oh my

Brett Connaughton: So, if we could just drag drop, drag drop, drag drop, drag drop. It's amazing.

Jade Nakabayashi: god.

Brett Connaughton: I have to move two flights to accommodate one advertiser on a show today. I'm actually I have an email drafted talking about it right now when we started. If I could do this, I could just go boom boom. Hey, this is moved. Heads up. There you go.

Jade Nakabayashi: Yeah.

Brett Connaughton: Instead, I have to go in and like manually redo three lines. So yes, this is how excited I am about

Jade Nakabayashi: It's wild that you all have gotten this far in Air Table honestly like really stretching

Brett Connaughton: this.

Jade Nakabayashi: the limits of what that tool can

Brett Connaughton: You would be Yeah,

Jade Nakabayashi: do.

Brett Connaughton: there's even when I was back at I mean the mantra in adops is just get it done. Unfortunately,

Jade Nakabayashi: Of

00:12:18

Brett Connaughton: like when I was in I was at Odyssey and I ran Odyssey's podcasting side of things,

Jade Nakabayashi: course.

Brett Connaughton: it was the same gig. It was just sales would be like can you do this? I'm like well technically and they go that's all we need. I'm like, "Oh, I should have said that out loud." Yeah.

Jade Nakabayashi: Yeah. Like, well, I can make it happen,

Brett Connaughton: Yeah. Just make it happen, get it done.

Jade Nakabayashi: but

Brett Connaughton: It's like, all right. But it's a pain in the butt. So, this cuts back on so many issues. You could tie a revenue number to how big that change is because it removes any

Jade Nakabayashi: yeah.

Brett Connaughton: potential mistakes when it comes to shifting flights.

Jade Nakabayashi: Yeah, that's huge. But I think so the question is like you know is there a way that we can consolidate

Brett Connaughton: Yes.

Jade Nakabayashi: these views and maybe layer them into this experience like consolidate the

Brett Connaughton: Yep.

Jade Nakabayashi: tiles here right and like have a more datari integration.

00:13:06

Jade Nakabayashi: Um,

Brett Connaughton: So,

Jade Nakabayashi: and if we were Yeah.

Brett Connaughton: kind of make Bob a one-stop shop for the ad

Jade Nakabayashi: If we were to do that, would it account for all of the use cases that these views entail?

Brett Connaughton: plan.

Jade Nakabayashi: And like I only had limited understanding. So it would be helpful if you kind of like spoke through how these are used today. if that like that idea makes sense,

Brett Connaughton: Yeah.

Jade Nakabayashi: you know, um to you at a high level like so that I could better understand like how to then recommend

Brett Connaughton: Mhm.

Jade Nakabayashi: migrating those use cases and data points to that like Bob as a one-stop stop model.

Brett Connaughton: Perfect. Okay, let's zoom in on top left.

Jade Nakabayashi: Okay. Oh,

Brett Connaughton: There we go. Okay,

Jade Nakabayashi: and then what is this here?

Brett Connaughton: so fill rate. Fill Yeah,

Jade Nakabayashi: Why is that

Brett Connaughton: fill rate is just percent of spots filled in an episode. So it's literally just mid rolls or just available spots.

00:13:57

Brett Connaughton: Mid roll one two three four five six divided so ones that are filled versus to divided by total.

Jade Nakabayashi: So for the week,

Brett Connaughton: So if you add it yes for for well for that episode.

Jade Nakabayashi: this is for the full week.

Brett Connaughton: So 121 so if you look this is a great example because Sean does too.

Jade Nakabayashi: Okay.

Brett Connaughton: This is going to be this is perfect. Do you see how we have 121 2025 right below right on that episode? Do you see how below it there's also another 12125 in the

Jade Nakabayashi: Are there multiple episodes on the same

Brett Connaughton: same week?

Jade Nakabayashi: day?

Brett Connaughton: So if you look to the right next to full, it says publish date.

Jade Nakabayashi: Mhm. Oh,

Brett Connaughton: So that's Sean's first publish date.

Jade Nakabayashi: so

Brett Connaughton: And if you look down, publish date is 124 for the other one. Shawn airs twice a week, Mondays and Thursdays. So,

Jade Nakabayashi: yeah,

Brett Connaughton: this is showing you the episode's fill rate, which is the amount of ads in that specific episode divided by the total available ad slots in an episode.

00:14:53

Brett Connaughton: So, in this case, that's just 5 divided by six.

Jade Nakabayashi: that makes sense. But why are there two Episode two on the same and then two different. What does this mean?

Brett Connaughton: week drop week that that that date on the left will always be a Monday.

Jade Nakabayashi: Oh, this is like the date of the week.

Brett Connaughton: Yeah.

Jade Nakabayashi: Okay.

Brett Connaughton: So, so very that's actually I didn't think about bringing that up.

Jade Nakabayashi: Okay.

Brett Connaughton: Um a podcast calendar is Monday through Sunday.

Jade Nakabayashi: Mhm.

Brett Connaughton: So, we start the week on Monday.

Jade Nakabayashi: Mhm.

Brett Connaughton: So when we refer So when we're looking at IO's when those come in and this might get a little too in the weeds we refer to a lot of things by the week that they drop in. And then if we need to specify further for example if we're saying the week of 121 2025 for

Jade Nakabayashi: Okay.

Brett Connaughton: Shawn we'll go all right yeah we'll do an episode and we'll give you an ad in the week of 121 but there's two episodes

00:15:44

Jade Nakabayashi: Okay. Yeah,

Brett Connaughton: there and then we'll specify further as needed.

Jade Nakabayashi: that makes sense. I'm tracking.

Brett Connaughton: Yes,

Jade Nakabayashi: What is this view for?

Brett Connaughton: this is how we move everything. This is how we see what's booked against a show's calendar. This is just Bob again, but when you click into this, it has the actual script,

Jade Nakabayashi: Mhm.

Brett Connaughton: it it it pulls all it pulls data from the copy upload page in Marley that adops runs and that's this actually populates our script. Um, it populates the revenue, the impressions, clickthroughs, all of that. ad plan and pulls in that data from two different places. That's good. That you got to go to something a bit more recent. You I would just say just I'll I'll tell you where you can look. Scroll down a little bit. You can Well, you can minimize that. Better paradise. We don't sell with them anymore. All right. Let's go to And that's Why We Drink.

00:16:53

Brett Connaughton: Scroll down till you start seeing 2026 dates. There you go. Click in any one of those.

Jade Nakabayashi: Okay. So this view is relevant because of the details that are appended to

Brett Connaughton: So it this is to my knowledge the

Jade Nakabayashi: it.

Brett Connaughton: partner portal view that gets pulled. Um but when we are going in so when we have to shift dates in the antiquated way this is what we use to do it.

Jade Nakabayashi: Mhm.

Brett Connaughton: We have to copy all of the data you're seeing in that pop out on the right hand side. We have to make sure that script is downloaded.

Jade Nakabayashi: Mhm.

Brett Connaughton: We have to make sure the show notes are copied. We have to make sure we know the revenue amounts and the revenue totals and the impressions. And then we go to wherever we're going to move that flight to and basically just reenter all of that data. And then we delete all of the data in the original one. And that's how we shift a flight.

00:17:53

Brett Connaughton: So Bob 2.0 No. dragging and dropping remove that ad plan is

Jade Nakabayashi: So His Sorry. Go ahead.

Brett Connaughton: Bob. Bob ad plan just allows you to It's Bob with

Jade Nakabayashi: Okay. So, as long as you're able to pull this data

Brett Connaughton: clickthroughs.

Jade Nakabayashi: with when you are like dragging dragging and dropping a show, right?

Brett Connaughton: Yep.

Jade Nakabayashi: That's what you're saying.

Brett Connaughton: Yes.

Jade Nakabayashi: Then we don't need this view like we need to surface

Brett Connaughton: Um more than likely not.

Jade Nakabayashi: this information.

Brett Connaughton: So there's there's a couple other things that we do with this too. That's the main function of it. The other thing you're going to see is uh if you could zoom in a little bit

Jade Nakabayashi: Okay.

Brett Connaughton: further, this is part of the automated process. But if you see on the right hand column uh if you scroll to the right a little bit, see where it says client approval required.

Jade Nakabayashi: Yeah.

Brett Connaughton: Sometimes we have to do pre-approval.

00:18:54

Brett Connaughton: So having that box checked allows us to get an automated reminder that we have to send a pre-approved. Uh we have to send a script or a draft of an ad for approval ahead of time.

Jade Nakabayashi: But it's just like that could be migrated into like a general checklist, right?

Brett Connaughton: It can absolutely be done in a different way. That's just the way it is right now.

Jade Nakabayashi: Okay.

Brett Connaughton: Um,

Jade Nakabayashi: Okay. Sorry, I'm kind of going all over the place.

Brett Connaughton: no,

Jade Nakabayashi: I hope

Brett Connaughton: you're good. You're good. I'm following along. So,

Jade Nakabayashi: not.

Brett Connaughton: yeah. I mean, add, copy, attachment gets us. That That's the script. That's what the partner sees. that's what the that's what the the host sees. So my team's main job is to make sure that that is always populated ahead of time and that that's never blank because if it is ad ops is not doing its job because that's what they need to record the ad.

00:20:05

Jade Nakabayashi: And that's this is where they're doing it is they're like literally going in here and looking for this row to be

Brett Connaughton: Um, no we are going into if you go to the ad ops tab on the left hand

Jade Nakabayashi: populated.

Brett Connaughton: side be towards the bottom and you go to copy upload the little dude

Jade Nakabayashi: Okay.

Brett Connaughton: surfing.

Jade Nakabayashi: Okay. Okay. I see.

Brett Connaughton: This is where we put that in.

Jade Nakabayashi: I see.

Brett Connaughton: And that lets us because we can filter by the ad copy trafficking status, we can because we work three weeks ahead minimum,

Jade Nakabayashi: Right.

Brett Connaughton: we can then check what flights in 3 weeks do have copy and have we reached out to the advertiser for the copy yet? Is the copy uploaded? Um, do we need to request the copy? Because we do this in kind of chunks. Um, So, this is

where we actually upload the ad copy and then it populates into what you were just looking at.

Jade Nakabayashi: Okay. So maybe if it's this model then like when you click on this it opens a drawer that is

00:21:08

Brett Connaughton: Yeah.

Jade Nakabayashi: effectively this drawer right because we want access to this content in the context of scheduling

Brett Connaughton: Yeah.

Jade Nakabayashi: Hey.

Brett Connaughton: you would need it to show that we have there's there's the one tricky part for it and this is going to be you'll meet with Kyle if you haven't already Kyle Larson um this is

Jade Nakabayashi: Uhhuh.

Brett Connaughton: his domain primarily on my team he specializes in getting all our copy out um he does basically

Jade Nakabayashi: Mhm.

Brett Connaughton: two sets of checks a week he does Monday he does what's called a copy audit which is he picks three weeks ahead of time sets his error date to that to filter what we just saw in the copy upload field. And he goes line by line. Is there a script? Is there not a script? Do I need to reach out for a script? And he marks everything. So if there is a script, he puts it in there. If there is no script, he sets it as need to request copy.

00:22:11

Brett Connaughton: Two days later on Wednesday, he goes back in, filters to need to request copy. He then sends out individual emails to every advertiser or agency stating show weak copy requirement. He then flips that to requested copy.

Jade Nakabayashi: But you're doing it here, right?

Brett Connaughton: He does all of that there. Yes.

Jade Nakabayashi: Yeah. Okay.

Brett Connaughton: So when in Bob 2.0, we need a view that lets us know that he's reached out and done that.

Jade Nakabayashi: Mhm.

Brett Connaughton: And being able to do it in the view that we just looked at makes it a bit easier because if Quint has 15 flights, we can see it all in one place and send one email out saying, "Please send Quint for the following shows versus the Bob view is

Jade Nakabayashi: Mhm.

Brett Connaughton: by show right now,

Jade Nakabayashi: Mhm.

Brett Connaughton: which means we would have to go through 55 shows and see if they have Quincson in that week before sending a singular email.

Jade Nakabayashi: Okay. So, you need an aggregate view of the status of the copy.

00:23:09

Brett Connaughton: Yes.

Jade Nakabayashi: Okay.

Brett Connaughton: And then yeah, basically so that's why that's laid out in such a way that's actually quite nice. Frankly, if we kept that copy upload field, you could do like two things and it would be very very um very very nifty. So if we go to the copy upload field um in the ad ops thing. Yeah. So he'll go through and we literally drag and drop our copy into where it says add copy attachment and it automatically updates into copy attached something that Kyle really wants and we know we've been told that this is probably on the back burner for a second in terms of functionality but we're more than h like my team tracks every agency and every client and who they belong to. if there

was a way he could filter it down to need to request copy and hit an auto send button and it just does a mail merge of we would have the the correct contact info for the advertiser and then just say we need and it pulls show name uh airweek advertiser and you he could just click a button and basically auto send emails the same way vetting requests work basically but send them external that would save him two to three hours a week.

00:24:19

Jade Nakabayashi: Mhm.

Brett Connaughton: Um, that's kind of a specialized function down the road, but he will bring that up when you meet with him, if you meet with him. But in terms of getting everything into just Bob for

Jade Nakabayashi: Mhm.

Brett Connaughton: the ad plan itself, it works one to one. What what you're seeing it can it can act as a data aggregator for that. It's when it comes down to looking at things from an advertiser point of view or from a weekly launch point of view that's where we need to be able to see a bit clearer.

Jade Nakabayashi: And maybe in that maybe so maybe there is a view that is inclusive. of the pre-approval notification and the aggregate view of copy status,

Brett Connaughton: Mhm. Yeah, you would basically I'll show you exactly what we do.

Jade Nakabayashi: right?

Brett Connaughton: So go into the go to the copy upload portion again that that tab. I'll show you exactly what we do so you can visualize what this could look like in Bob. So we'll go to that other window.

00:25:32

Jade Nakabayashi: Sorry, hold on.

Brett Connaughton: Nope, you're good. All right. So, yep, you're in the right tab. So,

Jade Nakabayashi: Okay.

Brett Connaughton: if you go to week of and put 83. So, it's going to be in the Yep. So, enter a date and just do August 3rd.

Jade Nakabayashi: Heat.

Brett Connaughton: This is the one we're working on this week. So, these are the different statuses that we see. So, if we see So, ignore stuff. We fired them. Um, do you see how we have stuff where it says requested copy? It's an orange burn. It's like a burnt orange color under ad copy trafficking.

Jade Nakabayashi: Come

Brett Connaughton: So my team goes through K we go through every week.

Jade Nakabayashi: on.

Brett Connaughton: Monday we check what we have and what we don't. Wednesday we reach out specifically asking for each individual line. If we could see if you can see it's done by advertiser. It's filtered by advertiser.

Jade Nakabayashi: Mhm.

Brett Connaughton: So right now we're seeing advertiser and week and copy status in one place.

00:26:38

Jade Nakabayashi: Mhm.

Brett Connaughton: If you can recreate that view and Bob,

Jade Nakabayashi: Mhm.

Brett Connaughton: it would be fine. But we need to be able to see those three things because we need to be able to reach out efficiently as opposed to individually by show. We would reach out, hey, uh, Amitara has one, two, three flights. We need copy for all three. Here's the shows we need copy

Jade Nakabayashi: Okay.

Brett Connaughton: for.

Jade Nakabayashi: But I think it's probably okay if that happens in a different place,

Brett Connaughton: Yeah,

Jade Nakabayashi: right?

Brett Connaughton: it doesn't have to be in this. I'm just telling you the three requirements for us to be able to do that properly is we need to see a view set up in such a way or

Jade Nakabayashi: Okay.

Brett Connaughton: filterable in such a way. So if you did honestly if you could if you could do a date aggregator in Bob and you could just have a sidebar we could open and just we could filter by week and then you would see each show running and there are four or five ad blobs by week and then you could filter it by has copy, doesn't have copy.

00:27:46

Brett Connaughton: Um, and you could basically just sort it down like you would any other pivot table. Um, am I good to think of a lot of this stuff as pivot table? That's kind of how what my brain defaults to. Um,

Jade Nakabayashi: Mhm.

Brett Connaughton: see, uh, advertiser name, podcast, week, ad copy. Yeah. Um, so if we go into Bob, your Bob mockup that you have, which is the great,

Jade Nakabayashi: All right.

Brett Connaughton: still the greatest thing ever. makes me so excited. So, if we looked at this, this is by show. If we could go show an if we could instead just go by week and have an option to just click into

Jade Nakabayashi: Mhm.

Brett Connaughton: like everything airing in a week across our network. So, instead of woman evolve,

Jade Nakabayashi: Mhm.

Brett Connaughton: it would just be all of our shows, but it would just be for the week of July 6th and then have this exact same UI.

Jade Nakabayashi: Mhm.

Brett Connaughton: If we could then take additional statuses like you have ready to record there.

00:28:48

Brett Connaughton: There's like a couple that the partners see that don't match one to one with what we see. But if we could see the copy status on those tiles and we could filter just to show us what has copy and what doesn't, we could do the exact same thing and just keep it in this.

Jade Nakabayashi: Yeah. Okay, that makes

Brett Connaughton: It just need Yeah, it we just need to be able to parse the data down or aggregate everything into one place like you said and then

Jade Nakabayashi: sense.

Brett Connaughton: see it from a show view but also by a network view for a

Jade Nakabayashi: Okay. I feel like I I actually have to hop,

Brett Connaughton: week.

Jade Nakabayashi: but I feel like I want to talk through these other views with you because like I'm sure there are unique use cases that in the way that right

Brett Connaughton: Adops does not use top right or bottom left.

Jade Nakabayashi: top right or bottom okay who sales

Brett Connaughton: sales does. Um, sales does. I'm probably the only person who uses bottom left occasionally and I do it a different way.

00:29:43

Brett Connaughton: Um, I just do it if I need to balance out ad load throughout the week. It's really not useful for me. Um, that would be a sales thing. I do mine the other way. Bob would do the same thing for me. Um I'm trying to is that aailable inventory.

Jade Nakabayashi: this view.

Brett Connaughton: Is that what that says? Yeah, I don't need that.

Jade Nakabayashi: Yeah.

Brett Connaughton: Adops does not need that. So maybe sales.

Jade Nakabayashi: Okay. So, I should go and have this conversation with sales then,

Brett Connaughton: Yeah, for those two,

Jade Nakabayashi: right?

Brett Connaughton: top left and uh top right and bottom left, Thomas and Kel use those a bunch. Um bottom right, I'm not sure if they do, but yeah,

Jade Nakabayashi: Okay.

Brett Connaughton: bottom bottom left shows fill rate, which is the same thing we see in a couple other places. It's just in table form. So, I would go for sales on that one.

Jade Nakabayashi: Okay.

Brett Connaughton: That's that's going to be more pertaining to them.

00:30:34

Brett Connaughton: Ad ops won't use anything but really the top

Jade Nakabayashi: Okay.

Brett Connaughton: left.

Jade Nakabayashi: Well, thank you so much. This has been so so helpful. I'm probably going to drop more time on your calendar, so thank you so much.

Brett Connaughton: Let's do a weekly.

Jade Nakabayashi: If I get annoying,

Brett Connaughton: Let's do a weekly.

Jade Nakabayashi: like tell me to go away.

Brett Connaughton: No, you're not. You're not.

Jade Nakabayashi: Okay, great.

Brett Connaughton: I This You're listening and you're understanding based on the questions you're asking.

Jade Nakabayashi: Cool.

Brett Connaughton: I know you're understanding. Even if you might not. You might feel like you're like, "What the?" You're asking the right questions.

Jade Nakabayashi: Okay,

Brett Connaughton: Um, Bob's a one-stop shop for everything.

Jade Nakabayashi: great.

Brett Connaughton: The more filters and the more customization an individual user can apply to it for adops, the better. That is the rule of thumb for that.

Jade Nakabayashi: Yeah.

Brett Connaughton: If we can filter by missing copy, if we can filter by needs preapproval,

Jade Nakabayashi: Okay.

Brett Connaughton: if we can filter by any of those metrics and pull it into that frame, we can function.

Jade Nakabayashi: Okay. May like it would be great. I don't know. Can you like maybe jot down some of those filters that you would like to see and just slack them to me?

Brett Connaughton: Yes.

Jade Nakabayashi: And I'm going to try to like realize some of this thinking in a way that I can read back to you and make sure that I understood what

Brett Connaughton: Done.

Jade Nakabayashi: we just went through.

Brett Connaughton: Done. Done. Done.

Jade Nakabayashi: Okay.

Brett Connaughton: Done.

Jade Nakabayashi: Awesome.

Brett Connaughton: Yes. I can get that today.

Jade Nakabayashi: Thank you so much. Okay. Hey, have a good weekend.
